Prepare detailed structural drawings of a steel structure</li> </ol>		
<b>Curriculum Content</b>		<b>Hours</b>

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<p><b>UNIT 1</b> Introduction to structural design, Structural systems, Roll of the designer, Advantages of steel as a structural material, Types of structural steel, Mechanical properties of steel, various rolled steel sections (including cold-formed sections, structural pipe (tubes) sections and their properties. Codes and specifications. Design philosophies, Limit state method.</p>	<p><b>4</b></p>
<p><b>UNIT 2</b> i) Bolted connections: Behavior of bolted joints. Design strength of ordinary black bolts, Design strength of ordinary black bolts, Design of simple connections, Beam to beam, beam to column, framed connections. ii) Welded connections: Types and properties of welds, Types of joints, Effective areas of welds, Design of simple connections, Beam to beam, beam to column, framed connections.</p>	<p><b>7</b></p>
<p><b>UNIT 3</b> Design of Tension members: Types of tension members, Slenderness ratio, Behavior of tension members, Modes of failure, Design of angle sections for tension.</p>	<p><b>6</b></p>
<p><b>UNIT 4</b> Design of Compression Members: Behavior of compression members, Modes of failure, Classification of cross section, Effective length of compression members, Design strength, Compression members in trusses, Design of columns subjected to axial loads, Laced and Battened columns. Column bases: Slab base and Gusseted base.</p>	<p><b>10</b></p>
<p><b>UNIT 5</b> Design of beams: Laterally restrained and unrestrained simply-supported beams. Design of compound beams. Curtailment of flange plates. Design of Gantry girder</p>	<p><b>6</b></p>
<p><b>UNIT 6</b> Design of Roofing for an industrial building: Roofing materials, Types of trusses, Loading on roof trusses, Analysis of trusses, Design of various members of roof trusses.</p>	<p><b>6</b></p>
<p><b>Text Books</b></p>	<p align="center">:</p>

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<b>Pre-requisites</b>	:	Geotechnical Engineering.
The prerequisite for this course is to possess the fundamental knowledge of highway engineering and planning, Highway material properties, bridge engineering, airport engineering.		
<b>Type of Course</b>	:	Theory
<b>Course Domain</b>	:	Core
<b>Skills Imbided</b>	:	Cognitive, Affective domain , Psychomotor
<b>Course Assessment Methods:</b>		
Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.		

**Course Objectives:**

1. To familiarize students with sub-branches of Transportation Engineering such as highway engineering, bridge engineering and airport engineering.
2. To make students learn various terminologies related with highway engineering, bridge engineering and airport engineering.
3. To study the various components involved in highway engineering, bridge engineering and airport engineering.
4. To understand the planning aspect involved in highway engineering, bridge engineering and airport engineering.

**Course Outcomes:**

7. Understand concepts and planning of highway engineering and highway safety.
8. Understand the concepts and analysis of highway geometric design.
9. Understand the principles and design of rigid and flexible pavements.
10. Decide the selection of a bridge structures; list the factors affecting, design of a various parameters of bridge structures.
11. Design and plan airport, runways terminals buildings, hangers and aprons.

<b>Curriculum Content</b>	<b>Hours</b>
<b>HIGHWAY ENGINEERING</b>	
<b>UNIT 1</b> Introduction Scope of highway engineering, Road development plans, Recent developments – NHAI, NHDP, PMGSY, MSRDC, Highway finance – BOT, Annuity, PPP, DBFO. Highway construction- Types of roads: WBM, BBM, SDBC, DLC & PQC.	<b>6</b>
<b>UNIT 2</b>	<b>10</b>

<p>Highway Geometric Design: terrain classification, cross-sectional elements highway alignment-definition, requirements, factors controlling alignment, alignment of hill roads., sight distances, horizontal alignment – super elevation, extra widening of pavement on horizontal curve, vertical alignment –gradient, vertical curves, design problems. Highway drainage- necessity, surface draining, sub-surface drainage.Traffic engineering- traffic characteristics, traffic studies. Traffic control devices-road marking, traffic sign, traffic signal, intersection.</p>	<p><b>12</b></p>
<p><b>UNIT 3</b></p>	
<p><b>Pavement materials-</b></p>	
<p>Bituminous materials: types,tests on bitumen, Bituminous mix design: principle, methods and modified binders.Stone aggregates: desirable properties, tests, requirements.</p>	<p><b>6</b></p>
<p><b>Design of pavements-</b></p>	
<p>Types of pavements, Design steps of flexible highway pavement as per IRC 37-2001 and problems based on CBR method, Design of rigid pavement as per IRC 58-2002, Stresses in rigid highway pavements, Joints in rigid pavements: transverse joints, longitudinal joints, fillers and sealers, Pavement design factors, design wheel load, equivalent single wheel load, repetition of loads, equivalent wheel load factors, strength characteristics of pavement materials, climatic variation.</p>	<p><b>6</b></p>
<p align="center"><b>BRIDGE ENGINEERING</b></p>	
<p><b>UNIT 4</b></p>	
<p>Introduction: Classification of bridges, selection of site, Bridge Hydrology: determination of design discharge, linear water way, economical span, location of piers and abutments, afflux, scour depth, design problems on above topics.</p>	
<p><b>UNIT 5</b></p>	
<p>Standard specification for bridges: - IRC loads, Railway bridge loading, forces acting on super structure. Design considerations, aesthetics of bridge design.Types of bridge foundations, Bridge piers, Abutments, Wing walls, bearings. Construction and maintenance of bridges—Introduction; Recent trends in bridges.</p>	
<p align="center"><b>AIRPORT ENGINEERING</b></p>	
<p><b>UNIT 6</b></p>	
<p>Introduction: Terminology, Airport Classification ICAO, components of an aircraft, aircraft characteristics.Airport Planning: Airport surveys, Site selection, Airport Obstructions, layouts, zoning laws, Environmental considerations. Air Traffic Control: VFR, IFR, Visual aids, airport lighting and marking. Runways: Orientation, wind rose, Basic runway length, Geometric design, Airport capacity, Runway patterns.Taxiways: Layout, geometrical standards, exit taxiways.Terminal Buildings: Site selection, facilities, aprons, parking systems and Heliport.</p>	
<p><b>Text Books</b></p>	<p align="center">:</p>

3. IRC: 58-2002 (Second Revision) – Guidelines for the Design of Rigid Pavements for Highways.
4. Indian Roads Congress -IRC, New Delhi.
5. IRC: 37-2001 – Guidelines for the Design of Flexible Pavements for Highways-Indian Roads Congress-IRC, New Delhi.

<i>Class &amp; Semester</i>	:	<b>T. Y. B.Tech (Civil Engineering), Part I, Sem V</b>			
<i>Course Title</i>	:	<b>Lab-I Transportation Engineering –I</b>	<i>Course Code:</i>	:	<b>CEL 316</b>
<b>Pre-requisites</b>	:	Geotechnical Engineering.			

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

The prerequisite for this course is to possess the knowledge of highway pavement materials, design of pavement and design of airport elements.

<b>Type of Course</b>	:	Practical
-----------------------	---	-----------

<b>Course Domain</b>	:	core
----------------------	---	------

<b>Skills Imbided</b>	:	Cognitive, Affective domain , Psychomotor
-----------------------	---	---

**Course Assessment Methods:**

Student is evaluated during External Practical Examination

**Course Objectives:**

1. To familiarize students to procedure about the conducting test on highway material.
2. To learn the objectives of conducting various test on highway material

**Course Outcomes:**

1. Students will be aware about the procedure adopted for conducting test on highway material.
2. Students will learn the objectives of conducting various tests on highway material.

<b>Practical covered</b>	:	
--------------------------	---	--

**The laboratory work should include the following:**

**Term work:**

**I) List of experiments:**

**A) Test on Aggregates**

1. Specific Gravity and Water Absorption Test.
2. Impact Value.
3. Abrasion Test.
4. Crushing Test.

**B) Test on Bituminous Materials**

1. Bitumen Penetration Test.
2. Softening Point.
3. Flash Point and Fire Point Test.
4. Ductility test.
5. Viscosity Test.
6. Stripping value Test.

**II) Assignments on each unit including design problems as follows**

1. Design of Flexible Pavement.
2. Design of Rigid pavement.
3. Airport Engineering.

**III) Industrial visit with report (Any One)**

1. Visit to Hot mix plant.
2. Visit to Road construction work.

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

3. Visit to AirPort.  
4. Visit to Bridge.

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<b>Pre-requisites</b>	:	Basic Civil Engineering ,Building Construction material
The prerequisite for this course is to possess the fundamental knowledge of civil engineering and Building Construction material and its properties.		
<b>Type of Course</b>	:	Theory
<b>Course Domain</b>	:	Core
<b>Skills Imbided</b>	:	Cognitive, Affective domain , Psychomotor
<b>Course Assessment Methods:</b>		
Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.		

<b>Course Objectives:</b>	
<ol style="list-style-type: none"> <li>1. To provide students with basic understanding of physical and mechanical properties of soil, together with knowledge of basic engineering procedures to identify factors controlling soil behavior and methods to determine soil properties. Students will acquire basic knowledge in engineering design of geotechnical systems</li> <li>2. To make students learn various terminologies related with Geotechnicaland soil engineering.</li> <li>3.To study the various earth pressure and stress distribution in geotechnical engineering.</li> <li>4. To understand the stability of slopes and slope stability analysis.</li> </ol>	
<b>Course Outcomes:</b>	
<ol style="list-style-type: none"> <li>1. Understand properties of Soil and its classification.</li> <li>2. Understand the concepts and analysis of permeability and seepage in soil.</li> <li>3. Understand the concept of Compaction and field control of compaction to enhance the strength of soil.</li> <li>3. Study the shear strength parameters and method to calculate shear strength of soil.</li> <li>4. Evaluate and understand the pressure distribution in soil.</li> <li>5. Evaluate earth pressures and apply to check external stability of retaining structures.</li> </ol>	
<b>Curriculum Content</b>	
<b>UNIT 1</b>	<b>Hours</b>
<b>Properties of Soil</b>	<b>6</b>
Introduction to Soil Mechanics, major soil deposits of India such as marine deposits, black cotton soils, lateritic soils, alluvial deposits and desert soils. Three phase soil system, structure of soil, particle size and shape, weight volume relationships, index properties of soil methods of determination and its significance, I.S. classification of soil, field identification of soils. Soil grain and soil aggregate properties of coarse and fine grained soils.	

<p><b>UNIT 2</b></p> <p style="text-align: center;"><b>Permeability and Seepage</b></p> <p>Permeability of soil, Capillary water, Darcy’s law. Factors affecting permeability. Determination of permeability by constant head and falling head method as per IS - 2720, field test as per IS – 5529 (part I)- pumping in test and pumping out test. Permeability of layered soils. Seepage forces. General flow equation. Flow net and its applications, quick sand condition. Uplift pressure, exit gradient, failure due to piping, criteria for design of filters.</p>	6
<p><b>UNIT 3</b></p> <p style="text-align: center;"><b>Compaction</b></p> <p>Soil compaction phenomenon. Factors affecting compaction. Dry density and moisture content relationship. Zero air voids line. Effect of compaction on soil structure. Standard Proctor test and Modified Proctor test as per IS – 2720. Field compaction equipment and methods. Placement water content. Field control of compaction, Compaction of cohesive and non-cohesive soils- relative density.</p>	6
<p><b>UNIT 4</b></p> <p style="text-align: center;"><b>Shear Strength of Soil</b></p> <p>Stress strain curve, Mohr circle of stress, Mohr-coulomb failure criteria, pore pressure, total and effective stress. Peak and residual shear strength. Factors affecting shear strength. Laboratory measurement of shear strength by direct, unconfined and triaxial tests under different drainage conditions. Vane shear test. Shear strength Characteristics of sand and clay. Sensitivity and thixotropy of cohesive soils.</p>	7
<p><b>UNIT 5</b></p> <p style="text-align: center;"><b>Stress Distribution in Soils</b></p> <p>Boussinesq’s theory- point load, line load, strip load, pressure distribution diagram on a horizontal and vertical plane, pressure bulb, Westergaard’s theory, contact pressure, approximate stress distribution method.</p>	7
<p><b>UNIT 6</b></p> <p style="text-align: center;"><b>Earth Pressure</b></p> <p><b>a) Lateral Earth Pressure</b> Limit analysis and limit equilibrium methods, effect of wall movement on earth pressure, earth pressure at rest, Rankine’s State of plastic equilibrium, submerged backfill, backfill with uniform surcharge, backfill with sloping, Surface, Coulomb’s theory.</p> <p><b>b) Stability of Slopes</b> Slope classification, slope failure, modes of failure. Infinite slope in cohesive and cohesionless soil, slope stability analysis using Swedish Slip Circle Method. Note- More emphasis would be given on basic fundamentals in the course work.</p>	7

<b>Reference Codes</b>		:	
<ol style="list-style-type: none"> <li>IS: 2116 - Permissible clay, silt &amp; fine dust contents in sand.</li> <li>IS:1498 1970- Classification and identification of soils for General Engineering purposes.</li> </ol>			

<b>Class &amp; Semester</b>	:	<b>T. Y. B.Tech (Civil Engineering), Part I, Sem-V</b>			
<b>Course Title</b>	:	<b>Lab-II Geotechnical Engineering –I</b>	<b>Course Code:</b>	:	<b>CEL 317</b>
<b>Pre-requisites</b>	:	Basic Civil Engineering.			
The prerequisite for this course is to possess the fundamental knowledge of civil engineering and Building Construction material and its properties.					
<b>Type of Course</b>	:	Practical			
<b>Course Domain</b>	:	core			
<b>Skills Imbided</b>	:	Cognitive, Affective domain , Psychomotor			
<b>Course Assessment Methods:</b>					
Student is evaluated during External Practical Examination					
<b>Course Objectives:</b>					
<ol style="list-style-type: none"> <li>To provide students with basic understanding of physical and mechanical properties of soil, together with knowledge of basic engineering procedures to identify factors controlling soil behavior and methods to determine soil properties. Students will acquire basic knowledge in engineering design of geotechnical systems</li> <li>To learn the objectives of conducting various test on Soil material.</li> </ol>					
<b>Course Outcomes:</b>					
<ol style="list-style-type: none"> <li>Students will be aware about the procedure adopted for conducting test on Soil material.</li> <li>Students will learn the objectives of conducting various tests on Geotechnical engineering material.</li> </ol>					
<b>Practical covered</b>	:				
<b>The laboratory work should include the following:</b>					

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

**Term work:**

**I) List of experiments:**

5. Specific gravity determination by voluminometer / pycnometer / density bottle.
6. Sieve analysis, particle size determination and I. S. classification.
7. Determination of consistency limits and its use in soil classification.
8. Field density test by core cutter, sand replacement method.
9. Determination of co-efficient of permeability by constant head and by variable head method.
10. Direct shear test.
11. Standard proctor test.
12. Unconfined Compression Test

**II) Industrial visit with report (Any One)**

1. Visit to Earthwork site.
2. Visit to Foundation construction work.

<i>Revision:</i>	:	<b>Second</b>			<i>Month</i>	:	<i>December 2017</i>	

<b><i>Pre-requisites</i></b>	:	Chemistry ,Basic Civil Engineering
The prerequisite for this course is to possess the fundamental knowledge of civil engineering		
<b><i>Type of Course</i></b>	:	Theory
<b><i>Course Domain</i></b>	:	Core
<b><i>Skills Imbided</i></b>	:	Cognitive, Affective domain , Psychomotor

***Course Assessment Methods:***

Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.

***Course Objectives:***

1. To demonstrated in-depth knowledge within environmental engineering and an awareness of potential social, economic, political, and environmental impacts of engineering practices.
2. An appreciation of the contribution of environmental engineers to the benefit of society and the responsibilities of a professional environmental engineer.
3. To study and design the various treatment processes for water treatment.

***Course Outcomes:***

1. To get knowledge of air and noise pollution
2. To make the students familiar with sources and its demand of water.
3. To understand the basic characteristics of water and itsdetermination.
4. To expose the students to understand the design of water supply lines.
5. To provide adequate knowledge about the water treatment processes and its design.
6. To have adequate knowledge on operation and maintenance of water supply and leakage Detection and Prevention.

<b>Curriculum Content</b>	<b>Hours</b>
<p><b>UNIT 1</b> Air Pollution-Definition, sources of air pollution, types and classification of air pollutants, Primary and Secondary air pollutants and their importance, Atmospheric stability, mixing heights, plume types and meteorological parameters. Effects of air pollution on –Human, Animals, Materials and Vegetation. Global Effects-Photochemical smog, heat island, ozone depletion, acid rain. Control of air pollution. Noise Pollution-Soures, effects and Control.</p>	<p><b>8</b></p> <p><b>8</b></p>
<p><b>UNIT 2</b> Sources of water, Factors considered in selection of source of water for treatment plant, Conveyance of raw water-, canals and pipelines, Hydraulics of conduits, Different types of pipes used and their suitability, designing of rising main., intake structure, different types of intake structures. Quality-Characteristics, Indian standards, Testing of raw water for physical, chemical and bacteriological parameters and their significance.</p>	<p><b>9</b></p>
<p><b>UNIT 3</b> Quantity-Population forecasting, different methods of population forecasting, rate of water consumption for various purposes, factors affecting demand of water, calculation of fire demand. Water Treatment: Necessity of water treatment processes. Different types of water treatment flow sheets. Aeration: Principle and Concept, Necessity, Methods, Design of cascade aerator.</p>	<p><b>9</b></p>

<p><b>UNIT 4</b> Sedimentation-Theory of sedimentation, types of suspended solids, determination of Settling velocity, Types of sedimentation tanks. Surface Loading, detention time, and design of PST, inlets and outlets arrangements Theory of chemical coagulation, Factors affecting coagulation, turbidity, rapid mixing, coagulant dosage, characteristics of water, optimum pH, Coagulant aids, choice of coagulants, common coagulants, coagulant aids like Bentonite clay, lime stone, silicates and poly electrolytes Rapid mixing -Necessity, gravitational, mechanical, pneumatic devices, Slow mixing and flocculation, design of flocculation chamber, mean velocity gradient “G” and power consumption, Concept of Plate settler and Tube settler.</p> <p><b>UNIT 5</b> Filtration: Theory of filtration, Mechanism of filtration, filter materials, Types of filters-Rapid gravity filter, slow sand-filter and pressure filter. Components, materials, underdrainage system, working and cleaning of filters, operational troubles, Design of filters. Theory of disinfection-Factors affecting efficiency of disinfection. Types of disinfectants, Mathematical relationship governing disinfections variables. Theory of chlorination, break point chlorination, bleaching powder estimation. Water softening methods- lime-soda, ion exchange method and Demineralization.</p> <p><b>UNIT 6</b> System of water supply-Continuous and intermittent system. Distribution of water-Different distribution systems and their components, layouts, Methods of supply like gravity, pumping and combination, Design of distribution system, determination of Balancing Capacity of ESR , Wastage and leakage of Water-Detection and Prevention, Water audit and Energy Audit Introduction of hydraulic modeling software’s</p>	<p align="center"><b>9</b></p> <p align="center"><b>9</b></p>

Publishers, 1993.

<i>Class &amp; Semester</i>	:	<b>T. Y. B.Tech (Civil Engineering), Part I, Sem-V</b>			
<i>Course Title</i>	:	<b>Lab-III Environmental Engineering –I</b>	<i>Course Code:</i>	:	<b>CEL 318</b>
<i>Pre-requisites</i>	:	Basic Civil Engineering.			
The prerequisite for this course is to possess the fundamental knowledge of civil engineering and Building Construction material and its properties.					
<i>Type of Course</i>	:	Practical			
<i>Course Domain</i>	:	core			
<i>Skills Imbided</i>	:	Cognitive, Affective domain , Psychomotor			
<b>Course Assessment Methods:</b>					
Student is evaluated during External Practical Examination					
<b>Course Objectives:</b>					
<ol style="list-style-type: none"> <li>3. To provide students with basic understanding of physical chemical and biological properties of water samples also the basic knowledge in engineering design of water supply systems.</li> <li>4. An appreciation of the contribution of environmental engineers to the benefit of society and the responsibilities of a professional environmental engineer.</li> </ol>					
<b>Course Outcomes:</b>					
<ol style="list-style-type: none"> <li>1. Students will be aware about the procedure adopted for conducting test on water samples.</li> <li>2. Students will learn the objectives of conducting various tests on Environmental engineering-I.</li> </ol>					
<i>Practical covered</i>	:				
<p><b>The laboratory work should include the following:</b></p> <p><b>Term work:</b></p> <p><b>Note-(a ,b&amp;c are compulsory.)</b></p> <p><b>a) List of experiments:</b></p> <p><b>(a) Determination of (Any Eight)</b></p> <ol style="list-style-type: none"> <li>13. pH and Alkalinity</li> <li>14. Hardness</li> <li>15. Chlorides</li> </ol>					

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

16. Chlorine demand and residual chlorine
17. Turbidity and optimum dose of alum
18. Sulphates
19. Fluorides
20. Iron
21. Most Probable Number (MPN)
22. .Ambient air quality monitoring for PM10/PM2.5, SO2& NO<sub>x</sub>.
23. Measurement of noise levels at various locations using sound level meter, Calculate cumulative noise level at any one location.

B) Site visit to water treatment plant: A report based on the visit to water treatment plant would be submitted and would form a part of the term work.

c) Design of various components of water treatment plant

Design of various components of water treatment plant would be carried out based on the theory covered in

Environmental Engineering-I.

**or**

C) Study of Software or programming for analysis of water distribution system

Programmes available for the design of various water treatment plants would be used or Computer Programmes to Design various units

<i>Class &amp; Semester</i>	:	<b>T. Y. B.Tech (Civil Engineering) Part I, Sem V</b>			
<i>Course Title</i>	:	<b>Construction Management</b>	<i>Course Code:</i>	:	<b>CE 315</b>

<i>Evaluation Scheme (Marks)</i>	:	CIE = (20+20+10) SEE = 50	IPE IOE EPE/EOE	:		<i>Duration of SEE</i>	: <b>3 hrs</b>
<i>Revision:</i>	:	<b>Second</b>				<i>Month</i>	: <b>December 2017</b>

<b>Pre-requisites</b>	:	Engineering Mathematics, Building Planning.
This course requires the students to know about basic of mathematics, communication skill, market knowledge, basic term used in banking.		
<b>Type of Course</b>	:	Theory
<b>Course Domain</b>	:	Core
<b>Skills Imbided</b>	:	Cognitive, Affective domain , Psychomotor
<b>Course Assessment Methods:</b>		
Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.		

<b>Course Objectives:</b>	
<ol style="list-style-type: none"> <li>1. To familiarize students with basics of engineering management.</li> <li>2. To understand the management of various resources like Material, Money, and Men required on site.</li> <li>3. To study the various financial concepts in construction industry.</li> <li>4. To understand the various on-site aspects like safety, planning etc. in details.</li> </ol>	
<b>Course Outcomes:</b>	
<ol style="list-style-type: none"> <li>1. Understand concepts and planning engineering management.</li> <li>2. Understand the concepts and analysis of resource management on site.</li> <li>3. Understand the financial concepts relating to construction industry.</li> <li>4. Understand the importance of safety on site.</li> </ol>	
<b>Curriculum Content</b>	
<b>Construction Management</b>	
<b>UNIT 1</b>	<b>Hours</b>
Time Management Introduction, steps in Project Management – work break down structure, Bar Chart, Mile stone chart, Gantt Chart. Activity On Arrow and Activity On Node	<b>09</b>
Introduction to PERT: Concept of probability, normal and Beta Distribution, Central limit theorem. Time estimates and calculations of project duration, critical path, slack, probability of project completion. (Problems).	<b>10</b>

<p><b>UNIT 2</b></p> <p>CPM : Introduction, Time estimates, floats, critical path.                  Network compression – Least Cost and optimum duration.                  Resource allocation-Smoothing and leveling.                  Updating of networks– needs, steps, project duration, and calculation for updated network.</p> <p><b>UNIT 3</b></p> <p>Resource Management                  Men- Resource allocation – smoothing and leveling.                  Material Management- definition by international federation of purchasing and material management. Objectives,                  Role Functions, Qualities of Material Manager, Material forecasting.                  Inventory Control- Necessity, Techniques such as ABC, EOQ, HML, VED, SDE, etc., lead-time, safety stocks.                  Assignment and Transportation Problems.</p> <p><b>UNIT 4</b></p> <p>Financial Management                  Objectives, managing working capital, Preparation of cash flow schedule based on funds available and project planning. Law of Diminishing Marginal Utility, Law of Substitution, Introduction to Engineering economics, importance, demand and supply, types of costs, Supply and Demand. Interest – simple, compound, continuous, effective.                  Value of Money – time and equivalence, tangible and intangible factors, introduction to inflation. Interest factors – Uniform series factors – derivations.</p> <p><b>UNIT 5</b></p> <p>Economic comparisons                  Discontinuing methods : Present worth method, equivalent annual cost method, capitalized cost method, net present value, internal rate of return, Benefit Cost Ratio, Payback Period Method.</p> <p><b>UNIT 6</b></p> <p>Site Layout                  Factors affecting, Typical layout few major construction projects.                  Safety Engineering                  Accident cost, Injury sources and causes, Effective safety programs occupational health hazards, Personal protective equipment, Preparation of safety programs for construction works.                  Introduction to MIS and its Application in Civil Engineering Industry.</p>	<p align="center"><b>10</b></p> <p align="center"><b>08</b></p> <p align="center"><b>10</b></p> <p align="center"><b>05</b></p>

<i>Revision</i>	:	<b>Third</b>				<i>Month</i>	:	<b>June 2018</b>		

<i>Pre-requisites</i>	:	As it is the introduction to the language, it has no any pre-requisites
-----------------------	---	---

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<b>Type of Course</b>	:	Audit Course at institute level
<b>Course Domain</b>	:	Linguistics
<b>Skills Imbided</b>	:	Cognitive: Understand, Predicting Situation, Comprehend, Affective : Receive, Listen, Respond, Showing self-reliance, Organize Psychomotor: Imitation, adaptation, articulation, origination
<b>Course Assessment Methods:</b> The students will be given five assignments each for 10 marks. At the end of the course, there will be a written test of 25 marks and a viva voce of 25 marks. There will be assessment for a total of 100 marks. Based on the marks obtained, they will be awarded with a grade similar to other credit courses. Though it is an audit course, obtaining passing grade is essential.		
<b>Course Objectives:</b> <ol style="list-style-type: none"> <li>To make the students able to communicate and translate in foreign languages for the <i>technical and scientific documentation</i>, beneficial to Defense and other Government sector services.</li> <li>To make them globally competent in the era of industrial liberalization.</li> <li>To complement their core studies in international business.</li> <li>To make them confident while opting for better career prospects in Multinational Companies (MNCs) for technical and scientific translation/ interpretation tasks while working for joint ventures or collaborative partnership.</li> </ol>		
<b>Course Outcomes:</b> <ol style="list-style-type: none"> <li>The students will be able to acquire a good knowledge the basic grammar of foreign language and learn Alphabet, Common Words and Phrases in foreign language.</li> <li>The students will also be able to learn to read the simple texts in foreign language.</li> <li>The students would be able to speak a little using the greetings, well wishes etc. in Foreign Language.</li> <li>The students will learn to count numbers, answer to the questions like, what is your name, surname, tell age, and can initiate little communication in Foreign Language.</li> <li>The students can also translate simple sentences in foreign language.</li> </ol>		
<b>Curriculum Content</b>		<b>Hours</b>
<b>Unit I:</b> General Information on Basic Grammar of the foreign language, Introduction to Alphabet.		<b>05</b>
<b>Unit II:</b> Gender of Noun, Number of Noun, Pronouns, Adjectives, Verbs and their usage in simple sentences, Numbers (up to 10), Simple Greetings in foreign language.		<b>05</b>
<b>Unit III</b> General Questions in foreign language, like What is your name/surname?Who/What is this? Etc.		<b>04</b>
<b>Unit IV:</b> Simple narration about self/family/friend/University in foreign language chosen for studies. Practicing the learnt topics in the class itself.		<b>05</b>
<b>Unit V:</b> Formation of simple sentences using Parts of Speech, Information on Cases, One or Two simple lessons from any book.		<b>05</b>
<b>Unit VI:</b> Basic information on Country & Culture of language under study.		<b>04</b>
<b>Reference Books</b>	:

This course requires the student to know about the basic concepts regarding mathematics, laws of mechanics, fluid statics & dynamics.		
<b>Type of Course</b>	:	Theory
<b>Course Domain</b>	:	Core
<b>Skills Imbided</b>	:	Cognitive, Affective domain , Psychomotor
<b>Course Assessment Methods:</b>		
Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.		
<b>Course Objectives:</b>		
<ol style="list-style-type: none"> <li>1. To impart the basic knowledge of importance of Hydrology &amp; irrigation in water resources development.</li> <li>2. To know various hydro meteorological parameters and their estimation.</li> <li>3. To create awareness about floods, their estimation using various methods.</li> <li>4. To understand the importance of irrigation in Indian agricultural industry considering cropping patterns.</li> </ol>		
<b>Course Outcomes:</b>		
<ol style="list-style-type: none"> <li>1. Apply the knowledge of estimation of hydro meteorological parameters.</li> <li>2. Design of efficient hydraulic structures.</li> <li>3. To develop different methods of efficient irrigation and water conservation.</li> <li>4. To develop the methods of consumptive use of surface water and groundwater.</li> </ol>		
<b>Curriculum Content</b>		<b>Hours</b>
<b>UNIT 1</b> <b>Introduction of Hydrology:</b> Definition, Importance and scope of hydrology, the hydrologic cycle. <b>Precipitation:</b> Forms and types of precipitation, Methods of measurement, Graphical representation of rainfall - Mass rainfall curves, Hyetograph. Determination of average precipitation over the catchment. <b>Evaporation:</b> Process, factors affecting, measurement and control of evaporation. <b>Infiltration:</b> Process, Factors affecting and measurement of Infiltration.		<b>10</b>
<b>UNIT 2</b> <b>Runoff:</b> Factors affecting runoff, Determination of annual runoff, Rainfall runoff relationship. <b>Hydrograph:</b> Storm hydrograph, Base flow and Separation of base flow, direct runoff hydrograph, Unit hydrograph – theory – assumptions and limitations. Derivation and use of unit hydrograph, Scurve hydrograph.		<b>8</b>
<b>UNIT 3</b> <b>Stream gauging:</b> Selection of site, discharge measurement by Area velocity method, slope Area method. <b>Floods:</b> Estimation of peak flow- empirical equations, rational method, Importance of Design flood, standard project flood, maximum probable flood, Introduction to flood frequency analysis.		<b>8</b>

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<p><b>UNIT 4</b>  <b>Ground water hydrology:</b>                  Occurrence, distribution and classification of ground water, Darcy’s law, Aquifer parameters- Permeability, specific yield, specific retention, porosity, storage coefficient, Transmissibility. Hydraulics of well under steady flow conditions in confined and unconfined aquifers, Specific capacity of well, Recuperation Test, constructional features of Tube wells and Open wells.</p>	<p><b>8</b></p>
<p><b>UNIT 5</b>  <b>Introduction to irrigation:</b>                  Definition and necessity of irrigation, ill-effects of irrigation, Surface, Sub-surface, Sprinkler irrigation, Drip Irrigation, Water logging and land drainage.  <b>Water requirement of crops:</b>                  Principal crops and crop seasons, cropping pattern and crop rotation, Classes and availability of soilwater, depth and frequency of irrigation, Duty, Delta, Base Period and their relationship, factors affecting duty, methods of improving duty.                  Assessment and efficiency of irrigation water. Gross Command Area, Culturable Command Area and command area calculations based on crop water requirement.                  Estimation of evapo-transpiration by blaney-criddle method and penman method.</p>	<p><b>10</b></p>
<p><b>UNIT 6</b>  <b>Minor Irrigation Works:</b>                  General layout, main components and functioning of –                  1. Percolation Tank, 2. K.T. Weir, 3. Bandhara irrigation 4. Lift irrigation  <b>Watershed Management:</b>                  Need and importance of watershed management, Soil conservation measures, Techniques of Rainwater and groundwater harvesting.</p>	<p><b>8</b></p>
<p><b>Text Books</b></p>	<p align="center">:</p>
<p>1. Irrigation Engineering – S. K. Garg – Khanna Publishers, Delhi.                  2. Irrigation, Water Resources and Water Power Engineering – Dr P.N. Modi                  3. <i>Teaching Scheme (Hours)</i>	:	4 hours/weeks = 4x 13 weeks= 52 hrs minimum	<i>Total Credits</i>	:	<b>04+ 00 +00 =04</b>
		Tutorial= 00hr/week			
		Practical= 00hr/week			

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<i>Evaluation Scheme (Marks)</i>	:	CIE = (20+20+10) SEE = 50 Total= 100	IPE IOE EPE/EOE	:		<i>Duration of SEE</i>	:	<b>3 hrs</b>
<i>Revision:</i>	:	<b>Second</b>				<i>Month</i>	:	<b>December 2017</b>

<b><i>Pre-requisites</i></b>	:	Geotechnical Engineering.
------------------------------	---	---------------------------

This course requires the student to know about the basic of civil engineering, fundamentals of geotechnical engineering, water resources engineering and structural engineering etc.

<b><i>Type of Course</i></b>	:	Theory
<b><i>Course Domain</i></b>	:	Core
<b><i>Skills Imbided</i></b>	:	Cognitive, Affective domain , Psychomotor

***Course Assessment Methods:***

Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.

***Course Objectives:***

1. To familiarize students with sub-branches of Transportation Engineering such as railway engineering, tunnel engineering, dock and harbour engineering.
2. To make students learn various terminologies related with railway engineering, tunnel engineering, dock and harbour engineering.
3. To study the various components involved in railway engineering, tunnel engineering, dock and harbour engineering.
4. To understand the planning aspect involved in railway engineering, tunnel engineering, dock and harbour engineering.

***Course Outcomes:***

1. Apply basics of railway engineering, its components and geometric design.
2. Signalling and interlocking in railway engineering, construction and maintenance of railway track and modern trends in railways.
3. To Understand principles and basics of tunnel engineering.
4. To Understand principles and basics of dock and harbor engineering.

<b>Curriculum Content</b>	<b>Hours</b>
---------------------------	--------------

<b>RAILWAY ENGINEERING</b>	
<p><b>UNIT 1</b></p> <p>a) Introduction, History , Organizational structure of Indian railways,railway lines classification based on speeds , Modernization in Railways and railway tracks, High speed rail tracks, metro rail, bullet train, hyper loop train concept.</p>	<b>12</b>
<p>b) Permanent Way: Types of rail sections, Components, coning of wheels. Rail creep, Rail defects, Rail joints, welding of rails, short welded rail (SWR), long welded rail (LWR) and continuously welded rail (CWR), sleepers requirement, Sleeper density, spacing, and types, Rail fittings, Elastic fastenings, bearing plates, anti-creep devices, check and guard rails, Ballast requirements and specification, Formation, Different cross sections of Track in cutting and embankment, suitability of drainage.</p>	<b>14</b>
<p><b>UNIT 2</b></p> <p>a) Geometric design: Alignment, gradient, horizontal curves, Grade Compensation on curves super elevation, design problems on above. Speed on curves, safe speed on curves using Indian railway formula only for fully transitioned curves. Gauge widening. Points, crossing and turnouts</p> <p>b) Points &amp; Crossing: Terms used, standard points and crossings, design of simple turnout various types of track junctions.</p> <p>c) Stations and yards: purpose, location, site selection, types and general layouts of terminus, Junction.</p> <p>d) Signalling and interlocking—Introduction, Construction and maintenance of railway track: methods, material required per KM of track, tools and plant used for plate laying, maintenance of Track, Modern trends in railways. Visit to railway station.</p>	<b>8</b>
<b>TUNNELING</b>	
<p><b>UNIT 3</b></p> <p>a) Introduction, Advantages and disadvantages of tunnel with respect to open cuts, Tunnel surveying, Surface surveys, Transferring centerline, Setting out and Transfer of Levels. Underground. Criteria for Selection of size and shape of tunnels, Factors affecting the methods of Tunneling. Geological investigation for tunnels and its importance, tunnel alignment, tunnel shafts, pilot tunnels.</p>	<b>8</b>
<p>b) Tunneling in hard rock, (TBM).</p>	<b>5</b>
<p>c) Tunneling in soft materials: shield methods. Tunnel lining (rock bolting and guniting), Safety measures, ventilation, lighting and drainage of tunnels.</p>	<b>5</b>
<p><b>UNIT 4</b></p>	<b>5</b>

Driving tunnels in hard ground Sequence of operation and typical distribution of time for each operations, Meaning of the term 'Faces of Attack', Drill blast method of tunneling for hard strata, Different patterns of drilling. Blasting and explosives  
 Meaning of the terms, types of explosives, method of blasting in brief.  
 Ventilation Meaning of the term, requirements a ventilating system, Methods of ventilation with advantages and disadvantages. Lighting and aspects of drainage in brief. Method of supporting roof consisting of shot creating. Cement grouting, rock bolting, Cast in-situ and precast lining.

**DOCK AND HARBOUR ENGINEERING**

**UNIT 5**

a) Introduction, Definition, Requirements, classification of harbors with examples, Factors affecting growth of port, Major Ports in India and abroad, Planning a Port, Selection of ideal location of harbor, Introduction to dredging.

Inland water transport in India, tides, waves, erosion, beach drift, littoral drift sand bars, coast protection, classification of ports and harbors, sites selection, break waters, jetties, wharves, piers, facilities required.

b) Types of dock, navigational aids, lighthouses, terminal buildings special equipments, Containerization.

**UNIT 6**

Breakwater and materials of construction for breakwater, Introduction to design of break waters, Dock, Bulkhead and Sea Walls, Design Considerations and Construction Materials, Revetments, Water front structures, Wharves, Jetty, Dolphins, Different types of dock fenders, Uses of wet docks and Dry/ Repair docks. Port facilities, Transit sheds and warehouses. Visit to dock, harbor or port.

<i>Evaluation Scheme (Marks)</i>	:	CIE = (20+20+10)	IPPE	:	<i>Duration of SEE</i>	:	3 hrs	
		SEE = 50	IOE	:				
		Total= 100	EPE/EOE	:				50
<i>Revision:</i>	:	<b>Second</b>				<i>Month</i>	:	<i>December 2017</i>

<b><i>Pre-requisites</i></b>	:	Chemistry, Basic Civil Engineering Knowledge					
This course requires the student to know about the method of analysis, Titration Basics of civil Engineering,							
<b><i>Type of Course</i></b>	:	Theory					
<b><i>Course Domain</i></b>	:	Core					
<b><i>Skills Imbided</i></b>	:	Cognitive, Affective domain , Psychomotor					
<b><i>Course Assessment Methods:</i></b>							
Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.							
<b><i>Course Objectives:</i></b>							
4. To describe wastewater , its sources, characteristics and collection system							
5. To design the various treatment processes for wastewater treatment.							

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

6. To study different operational problems and their remedies .
7. To explain various aspects of solid waste management.
8. To outline the effects of air pollution and its control measures.

**Course Outcomes:**

At the end of this course students will be able to learn to

- 1 Explain sources, characteristics and collection system of wastewater.
- 2 Design the various treatment processes for wastewater treatment.
- 3 Apply the knowledge to solve different operational problems and their remedies
- 4 Understand importance of solid waste management.
- 5 Describe the effects of air pollution and its control measures.

<b>Curriculum Content</b>	<b>Hours</b>
<p><b>UNIT 1</b></p> <p><b>Introduction</b></p> <p>Objective, Basic design considerations like Engineering , Environmental Process, flow diagrams, Design Period.</p> <p><b>Characteristics of wastewater</b></p> <p>Physical, Chemical and Biological characteristics, Wastewater sampling and analysis, and practical Significance of test results.</p> <p><b>River Sanitation</b></p> <p>Self-purification of natural streams, Stream standards, effluents Standards, Oxygen Sag Curve.</p>	<p><b>8</b></p>
<p><b>UNIT 2</b></p> <p><b>Sewerage Flow</b></p> <p>Sources of sewage, Variations in sewage flow, storm-water runoff, ground water infiltration.</p> <p>Design of sanitary sewers, Minimum size of sewer, velocities in sewers and gradient of sewers.</p> <p>Sewer appurtenances i.e. manholes, street inlets, flushing devices, Vent pipes etc.</p> <p>Pumping of sewage, types of pumps for sewage pumping.</p>	<p><b>9</b></p>
<p><b>UNIT 3</b></p> <p><b>Wastewater Treatment</b></p> <p><b>Theory and design of primary treatment UNITS.</b></p> <p><b>Screens:</b> Types of screens, design of screen chamber, disposal of Screenings.</p> <p><b>Grit Chamber:</b> Sources of grit, velocity control in grit chamber, design of grit chambers including proportional flow weir, disposal of grit,</p> <p>Sources of oil and grease, importance of removal, methods of oil and grease removal, design of skimming tanks.</p>	<p><b>9</b></p>

**Primary Sedimentation:** Necessity, design of PST with inlet and outlet details, Primary Sludge and its disposal.

**UNIT 4**

**Theory and Design of Aerobic Secondary Treatment UNITS**

**Activated sludge Process:** Biological principle, modification of ASP, sludge volume index, sludge bulking and control.

**Trickling filter:** Biological principle, different T.F. And their characteristics, Design of standard rate or High rate filters, single stage and two stage filters, Recirculation, Ventilation, Operational problems, Control measure, Rotating Biological Contactor.

**Theory and Design of Anaerobic Treatment Units**

Septic tanks, suitable conditions and situations, biological Principle, method of treatment and disposal of septic Tank effluent.

**UNIT 5**

**Solid Waste Management :**

Definition, types, sources, characteristics. Functional outline, Generation, storage, collection, Processing techniques.

Methods of treatment, Composting, Incineration, Pyrolysis, Sanitary land filling, Concept of Hazardous waste management.

**UNIT 6**

**Emerging Technologies for Waste Water Treatment**

Centralized sewage treatment systems, Consequences of centralized wastewater treatment, Objectives of small and decentralized wastewater treatment systems

Advantages of Decentralized Wastewater Treatment, Applications of decentralized wastewater management to:

- a) Root zone Technology Principle, types of plants used, advantages, disadvantages
- b) Constructed wastelands process description, advantages and disadvantages
- c) Duckweed ponds process description, advantages and disadvantages
- d) Fluidized aerobic bed technology Principle, process description, advantages Disadvantages
- e) Up flow sludge Blanket Reactors (UASBR) - Principle, design, advantages and disadvantages

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<b>Pre-requisites</b>	:	Soil Mechanics and Geotechnical engineering –I.
The prerequisite for this course is to possess the fundamental knowledge of Soil engineering and Geotechnical engineering-I.		
<b>Type of Course</b>	:	Theory
<b>Course Domain</b>	:	Core
<b>Skills Imbided</b>	:	Cognitive, Affective domain , Psychomotor
<b>Course Assessment Methods:</b>		
Student is evaluated during Continuous Internal Evaluation (Internal Test I & Internal Test II) and Semester End Examination.		

<b>Course Objectives:</b>	
<ol style="list-style-type: none"> <li>1. To provide a coherent development to the students for the courses in sector of Geotechnical Engineering &amp; Soil Improvement Techniques etc.</li> <li>2. To involve the application of scientific and technical principles of planning, analysis, design of foundation along with soil improvement techniques.</li> <li>3. To study the bearing capacity of soil and settlement calculation in geotechnical engineering.</li> <li>4. To present the foundations of many basic Engineering tools and concepts related Geotechnical Engineering.</li> </ol>	
<b>Course Outcomes:</b>	
<ol style="list-style-type: none"> <li>1. Understand various field test for bearing capacity of soil and to investigate the soil.</li> <li>2. Determine the pre consolidation pressure and consolidation in soil.</li> <li>3. Understand the concept of bearing capacity and its analysis by using various equations.</li> <li>4. Evaluate and understand the consolidation settlement and settlement in soil.</li> <li>5. Design the various types of foundation and its calculations.</li> </ol>	
<b>Curriculum Content</b>	
<b>UNIT 1</b>	<b>Hours</b>
<b>Introduction</b>	<b>6</b>
Functions of substructure, Common Types of foundations viz. shallow and deep foundations, isolated and combined footings, raft, pile, well foundations, suitability and applications. Minimum depth of footing, effect of surcharge load on foundations, allowable soil pressure, and serviceability requirements.	
<b>UNIT 2</b>	<b>7</b>
<b>Soil Exploration</b>	
Purpose, importance, methods of soil exploration, subsurface exploration, trial pits, boring: method of borings. Number of boreholes, depth and spacing of boreholes, types of test to suit the soil conditions, Location of water table, Sampling: Disturbed And Undisturbed Samples, Field tests: SPT, DCPT, SCPT, pressure-meter test, plate load test, field vane shear test.	

<p><b>UNIT 3</b></p> <p style="text-align: center;"><b>Consolidation</b></p> <p>Spring analogy, Terzaghi's theory of one dimensional consolidation, Lab consolidation test, determination of consolidation parameters viz. <math>c_c</math> <math>c_v</math> , <math>m_v</math> and <math>a_v</math>. Square root and logarithm of time fitting method. Rate of settlement, normally and over consolidated soils, Determination of pre consolidation pressure, Evaluation of consolidation settlement.</p>	<b>6</b>
<p><b>UNIT 4</b></p> <p style="text-align: center;"><b>Shallow Foundation</b></p> <p><b>a) Bearing Capacity</b></p> <p>Terzaghi's bearing capacity analysis, Meyerhof, Hansen's and basic equations for strip, rectangular and round footing, effect of various BC factor on bearing capacity, Use of field test (SPT and Plate Load) data for bearing capacity determination, bearing capacity of rocks, RQD concept.</p> <p><b>b) Settlement</b></p> <p>Total and differential settlement, Tolerable settlement, IS Criteria, Concept of pressure bulb.  <b>Slope Stability:</b> Stability of finite slopes- slip circle method, Semi graphical and graphical methods, location of critical slip circle center, Friction circle method, , Stability number concept and its use.</p> <p><b>c) Design of Shallow Foundation</b></p> <p>Concept of isolated and floating foundation, Raft foundation.</p>	<b>7</b>
<p><b>UNIT 5</b></p> <p style="text-align: center;"><b>Pile Foundation</b></p> <p>Pile classification, Carrying capacity of pile, static and dynamic methods, pile load test, group action, Rigid block method, Negative skin friction, Settlement of single and group of piles.</p>	<b>7</b>
<p><b>UNIT 6</b></p> <p style="text-align: center;"><b>Well Foundation and Caissons</b></p> <p>Element of wells, types, methods of construction, tilt and shift, remedial measures,  <b>Pneumatic caissons:</b> Caisson disease.</p> <p><b>Sheet Piles:</b> Classification, Design of cantilever sheet pile in cohesionless and cohesive soils. Design of anchored sheet pile by free earth support method. Cellular Cofferdams: Types, cell fill stability considerations.</p>	
<p><b>UNIT 6</b></p> <p style="text-align: center;"><b>Well Foundation and Caissons</b></p> <p>Element of wells, types, methods of construction, tilt and shift, remedial measures,  Pneumatic caissons: Caisson disease.  Sheet Piles: Classification, Design of cantilever sheet pile in cohesionless and cohesive soils. Design of anchored sheet pile by free earth support method. Cellular Cofferdams: Types, cell fill stability considerations.</p>	<b>6</b>

Demonstration on soil sampling.</li> </ol> <p><b>II) A) Design Problem-</b></p> <ol style="list-style-type: none"> <li>1. Bearing capacity calculation by various method and settlement calculations</li> <li>2. Design of shallow foundation</li> <li>3. Pile and Pile group</li> <li>4. Cantilever sheet pile</li> <li>5. Stability analysis</li> </ol> <p><b>III) Industrial visit with report (Any One)</b></p> <ol style="list-style-type: none"> <li>1. Visit to Earthwork site.</li> </ol>					

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

2. Visit to Foundation construction Site and preparation of report.

<i>Class &amp; Semester</i>	:	<b>T. Y. B.Tech (Civil Engineering), Part II, Sem VI</b>					
<i>Course Title</i>	:	<b>Lab-III Structural Design and Drawing - I</b>	<i>Course Code:</i>	:	<b>CEL 328</b>		
<i>Teaching Scheme (Hours)</i>	:	2 hr /week=2x13= 26 hrs			<i>Credits</i>	:	<b>1</b>
<i>Evaluation Scheme (Marks)</i>	:	IPE	:		EPE	:	
		IOE	:	+	EOE	:	50 = 50
<i>Revision:</i>	:	Second			<i>Month</i>	:	<i>December 2017</i>

<b><i>Pre-requisites</i></b>	:	
The prerequisite for this course is to possess the knowledge of design of various components of steel structure by Limit State Method of Design.		
<b><i>Type of Course</i></b>	:	Practical
<b><i>Course Domain</i></b>	:	core
<b><i>Skills Imbided</i></b>	:	Cognitive, Affective domain , Psychomotor
<b><i>Course Assessment Methods:</i></b>		
Student is evaluated during External Practical Examination		
<b><i>Course Objectives:</i></b>		
<ol style="list-style-type: none"> <li>1. To understand the use of IS Codes related to structural design of steel structures</li> <li>2. To calculate loads on steel structure</li> <li>3. To analyze the steel structure</li> <li>4. To design steel structure</li> <li>5. To prepare detailed structural drawings of a steel structure</li> </ol>		
<b><i>Course Outcomes:</i></b>		
<ol style="list-style-type: none"> <li>1. Understand the use of IS Codes related to structural design of steel structures</li> <li>2. Calculate loads on steel structure</li> <li>3. Analyze the steel structure</li> <li>4. Design steel structure</li> <li>5. Prepare detailed structural drawings of a steel structure</li> </ol>		
<b><i>Practical covered</i></b>	:	
<b>The laboratory work should include the following:</b>		
<ol style="list-style-type: none"> <li>1. Design of any <b>ONE</b> structure as per IS 800- 2007             <ol style="list-style-type: none"> <li>a) Industrial building with roof supported by steel trusses.</li> </ol> </li> </ol>		

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

- b) Pedestrian bridge
- c) Design of Pre Engineered Building
- 2. Design of any **ONE** structure
  - a) Design of continuous beams using plastic analysis as per SP:6
  - b) Design of plate girder (welded)
- 3. The Report should include :Brief Technical design project report involving Introduction, assumptions, load calculations, analysis, preferably using suitable software (such as STADD.PRO, STRUD, ETABS, SAP, etc.) and detailed design.
- 4. Drawings  
Structural plan and detailed structural drawings (AUTOCAD may be used)
- 5. Report of a site visit mentioning structural details with relevant sketches of structural connections.

<i>Class &amp; Semester</i>	:	<b>T. Y. B.Tech (Civil Engineering), Part III, Semester VI</b>					
<i>Course Title</i>	:	<b>Research Methodology</b>			<i>Course Code:</i>	:	<b>RM 331</b>
<i>Teaching Scheme (Hours)</i>	:	<b>2 hr /week= 2 x13= 26 hours</b>			<i>Credits</i>	:	<b>Nil</b>
<i>Evaluation Scheme (Marks)</i>	:	<b>Assignments</b>	:	<b>50</b>	<b>Written Test</b>	:	<b>25</b>
		<b>Viva voce</b>	:	<b>25</b>	<b>Grand Total</b>	:	<b>100</b>
<i>Revision</i>	:	<b>Third</b>			<i>Duration of Exam</i>	:	<b>Not Applicable</b>
					<i>Month</i>	:	<b>June 2018</b>

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

<b>Pre-requisites</b>	:	H.S.C level English Language Competency
<b>Type of Course</b>	:	Audit Course at institute level
<b>Course Domain</b>	:	Research Skills
<b>Skills Imbided</b>	:	Cognitive: Understand, Predicting Situation, Comprehend, Affective : Receive, Listen, Respond, Showing self-reliance, Organize Psychomotor: Imitation, adaptation, articulation, origination
<b>Course Assessment Methods:</b> The students will be given five assignments each for 10 marks. At the end of the course, there will be a written test of 25 marks and a viva voce of 25 marks. There will be assessment for a total of 100 marks. Based on the marks obtained, they will be awarded with a grade similar to other credit courses. Though it is an audit course, obtaining passing grade is essential.		
<b>Course Objectives:</b> <ol style="list-style-type: none"> <li>To gain familiarity with research phenomenon or to achieve new insights into it (known as exploratory or formulative research studies) ;</li> <li>To develop an understanding of various research designs and techniques;</li> <li>To identify various sources of information for literature review and data collection;</li> <li>To judge the frequency with which something occurs or with which it is associated with something else (known as diagnostic research studies);</li> <li>To know about testing a hypothesis of a causal relationship between variables (known as hypothesis-testing research studies) ;</li> </ol>		
<b>Course Outcomes:</b> At the end of the course, the students <ol style="list-style-type: none"> <li>Will be able to understand some basic concepts of research and its methodologies;</li> <li>Will be able to identify appropriate research topics ;</li> <li>Will be able to select and define appropriate research problem and parameters;</li> <li>Will be able to prepare a project proposal (to undertake a project) ;</li> <li>Will be able to organize and conduct research (advanced project) in a more appropriate manner write a research report;</li> </ol>		
<b>Curriculum Content</b>		<b>Hours</b>
<b>Unit I: Introduction to Research:</b> Definition and basic Types of research, Research process and steps in it, Concept of Hypothesis, Research proposals and aspects.		<b>03</b>
<b>Unit II: Basic Statistics required for any research</b> Introduction to Descriptive Statistics, Statistical data, Variable, Classification of data, exploratory data analysis, Measures of central tendency, Dispersion-Standard deviation,		<b>06</b>

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

Correlation and regression analysis.		
<b>Unit III: Introduction to Design of Experiment:</b> Concept of design of experiment, its objectives, strategies, Factorial experimental design, designing engineering experiments, basic principles, of replication. Guidelines of experiments.		<b>06</b>
<b>Unit IV : Single Factor Experiment:</b> Hypothesis testing, Analysis of Variance components (ANOVA) for fixed effect model; Total, treatment and error of squares, Degrees of freedom, Confidence interval; ANOVA for random effects model, Estimation of variance components, goodness of fit tests, Chi-Square test, Kolmogorov-Smirnov(K-S ) test.		<b>07</b>
<b>Unit V: Two factor Factorial Design:</b> Basic definitions and principles, main effect and interaction, response surface and contour plots, General arrangement for a two-factor factorial design; Models-effects, means and regression, Hypothesis testing.		<b>07</b>

**Equivalence of Third Year B.Tech (Civil Engineering)**

**Semester V and VI**

The above detailed syllabus is a revised version of the Third Year. B.Tech (Civil Engineering) course being conducted by the Shivaji University at the Technology Department of the University. This syllabus is to be implemented from Academic year 2018-2019). The prime feature of this revision is the transformation of the existing curriculum into the Outcome based curriculum as specified in NBA rules and regulations.

The Equivalence for the subjects of Civil Engineering at Third Year B Tech Semester V and VI pre-revised course under the faculty of Engineering and Technology is as follows.

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

**Third Year B.Tech Semester V (Civil Engineering)**

<b>Sr.No</b>	<b>Third Year B.Tech Semester V (Civil Engineering) Pre-revised syllabus</b>	<b>Third Year B.Tech Semester V (Civil Engineering) Revised syllabus</b>	<b>Remark</b>
1.	Design of steel Structures	Design of steel Structures	No change
2.	Transportation Engineering –I	Transportation Engineering –I	No change
3.	Geotechnical Engineering- I	Geotechnical Engineering- I	No change
4.	Environmental Engineering-I	Environmental Engineering-I	No change
5.	Construction Management	Construction Management	No change
6.	Lab-I Transportation Engineering –I	Lab-I Transportation Engineering –I	No change
7.	Lab-II Geotechnical Engineering- I	Lab-II Geotechnical Engineering- I	No change
8.	Lab-III Environmental Engineering-I	Lab-III Environmental Engineering-I	No change
9.	Seminar	Seminar	No change
10.	Internship-I	Internship-I	No change
11.	Presentation and Communication Techniques	Presentation and Communication Techniques	No change

**Third Year B.Tech Semester VI (Civil Engineering)**

<b>Sr.No</b>	<b>Third Year B.Tech Semester VI (Civil Engineering) Pre-revised syllabus</b>	<b>Third Year B.Tech Semester VI (Civil Engineering) Revised syllabus</b>	<b>Remark</b>
1.	Theory of structures -II	Theory of structures -II	Change in Number of Lecture
2.	Water Resource Engineering -I	Water Resource Engineering -I	No change

**Department of Technology (Civil Engineering) Program – Syllabus w.e.f. 2018-2019**

3.	Transportation Engineering –II	Transportation Engineering –II	No change
4.	Environmental Engineering-II	Environmental Engineering-II	No change
5.	Geotechnical Engineering- II	Geotechnical Engineering- II	No change
6.	Lab-I Geotechnical Engineering- II	Lab-I Geotechnical Engineering- II	No change
7.	Lab-II Environmental Engineering-II	Lab-II Environmental Engineering-II	No change
8.	Lab-III Structural Design Drawing-I	Lab-III Structural Design Drawing-I	IOE for 50 Marks added
9.	Mini Project	Mini Project	No change
10.	Internship- II	-----	Shifted to Semester VII
11.	Research Methodology		No change
