Semester I

C-10 Research Methodology

Teaching Scheme

Lectures: 2 Hrs./Week

Examination Scheme

Course Outcomes:

- To get the knowledge of some basic concepts of research and its methodologies
- To select and define appropriate research problem and parameters
- To prepare a research proposal (to undertake a project)
- To organize and conduct research (advanced project) in a more appropriate manner
- To write a research report and thesis

Unit 1 Research Methodology: An Introduction

4hrs.

Objectives of Research, Types of Research, Research Methods and Methodology, Defining a Research Problem, Techniques involved in Defining a Problem

Unit 2 Research Design

6hrs.

Need for Research Design, Features of Good Design, Different Research Designs, Basic Principles of Experimental Designs, Sampling Design, Steps In Sampling Design, Types of Sampling Design, Sampling Fundamentals, Estimation, Sample size Determination, Random sampling

Unit 3 Measurement and Scaling Techniques

4hrs.

Measurement in Research, Measurement Scales, Scales, Sources in Error, Techniques of Developing Measurement Tools, Scaling, Meaning of Scale, Scale Construction Techniques

Unit 4 Methods of Data Collection and Analysis

4hrs.

Collection of Primary and Secondary Data, Selection of appropriate method, Data Processing Operations, Elements of Analysis, Statistics in Research, Measures of Dispersion, Measures of Skewness, Regression Analysis, Correlation

Unit 5 Techniques of Hypotheses, Parametric or Standard Tests

4hrs.

Basic concepts, Tests for Hypotheses I and II, Important parameters, Limitations of the tests of Hypotheses, Chi-square Test, Comparing Variance, as a non-parametric Test, Conversion of Chi to Phi, Caution in Using Chi- square test

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Unit 6 Analysis of Variance and Co-variance

4hrs.

ANOVA, One way ANOVA, Two Way ANOVA, ANOCOVA,
Assumptions in ANOCOVA, Multivariate Analysis Technique,
Classification of Multivariate Analysis, factor Analysis, R-type Q Type
Factor Analysis, Path Analysis

Unit 7 Interpretation and Report

1hrs.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Semester I

C 11 High Speed Analog Design Techniques

Teaching Scheme

Lectures: 4 Hrs./Week

Credit: 4

Practical: 2Hrs/Week

Credit: 1

Examination Scheme

Course Outcomes:

- To get fundamental concept of architecture of analog ICs like OPAMP, Video, Imaging, Communications, and Instrumentation ICs etc.
- To be Familiar with ICs used in many applications such as video, imaging, communications, instrumentation etc.
- Design of high speed analog circuits

Unit 1: High Speed Operational Amplifiers

6hrs.

Folded Cascode Voltage Feedback Op-Amps, Case study of AD847, Current Feedback Op-Amps (CFB), CFB model and Bode plot, study of AD8011, Comparison of specifications of Current feedback Op-amp family AD8001, AD8002, AD8009 and AD8073, Noise comparisons between VFB and CFB Op Amps, PSRR Characteristics.

Unit 2: High-Speed applications based on Op-amps

7hrs.

Optimizing feedback network for maximum bandwidth fitness, Driving Capacitive load, drivers and receivers, High performance video line driver, Differential line drivers and receivers, High speed clamping amplifiers, High speed current to voltage converters and the of inverting input capacitance,

Unit 3: High speed amplifiers for communication applications Low noise amplifiers for communication systems, Mixers, Power amplifiers, Liner drivers, Automatic gain control amplifiers

6hrs.

Unit 4: High speed system for video applications

7hrs.

High speed video multiplexing with Opamps using disable function, Video programmable gain amplifier, Video multiplexers and Cross Point switches, High power line drivers and ADSL, High speed photodiode Pre amps, Case studies of AD830, AD9002

Unit 5: High speed RF/IF Subsystems

6hrs.

Dynamic range compression, Linear VCAs, Log/Limiting Amplifiers, Receiver overview, Multipliers, modulators and mixers,

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Unit 6:

7hrs.

Case study of AD600 Dual Channel X-amp, AD641 monolithic log amplifier.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Semester I

C 12 Reconfigurable Platforms and HDL

Teaching Scheme

Lectures: 4 Hrs./Week

Credit: 4

Practical: 2Hrs/week

Credit: 1

Course outcomes

- To learn different reconfigurable architectures.
- To be Familiar with SoC, NoC.
- To be capable of designing and implementing combinational and sequential digital circuits and optimize them with respect to different constraints, such as area, delay, power, or reliability.

Examination Scheme

Unit 1:

Computing requirements, Area, Technology scaling, Instructions, Custom Computing Machine, Overview, Comparison of Computing Machines.

6hrs.

Unit 2:

Interconnects, Requirements, Delays in VLSI Structures; Partitioning and Placement, Routing; Computing Elements, LUT's, LUT Mapping, ALU and CLB's, Retiming, Fine-grained & Coarse-grained structures; Multicontext; Comparison of different architectures viz. PDSPs, RALU, VLIW, Vector Processors, Memories,

7hrs.

Unit 3:

Arrays for fast computations, CPLDs, FPGAs, Multicontext, Partial Reconfigurable Devices; TSFPGA, DPGA, Matrix; Best suitable approach for RD; Case study. Control Logic, Binding Time and Programming Styles, Overheads, Data Density, Data BW, Function density, Function diversity, Interconnect methods, Best suitable methods for RD;

6hrs.

Unit 4:

Contexts, Context switching; Area calculations for PE; Efficiency, ISP, Hot Reconfiguration; Case study. Architectures for existing multi FPGA systems, Compilation Techniques for mapping applications described in a HDL to reconfigurable hardware, Study of existing reconfigurable computing systems to identify existing system limitations and to highlight opportunities for research;

7hrs.

Unit 5:

Software challenges in System on chip; Testability challenges; Case studies. Modeling,

6hrs.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Temporal partitioning algorithms, Online temporal placement, Device space management,

Unit6:

7hrs.

Direct communication, Third party communication, Bus based communication, Circuit switching, Network on chip, Dynamic network on chip, Partial reconfigurable design.

M.TECH (Electronics Technology) PROGRAMMES

Semester I

C 13 Communication Networks

Teaching Scheme

Lectures: 4 Hrs./Week

Credit: 4

Practical: 2Hrs/Week

Credit: 1

Course Outcomes

- To get acquainted with different aspects of IPv6.
- To be familiar with TCP/IP and wireless communication technology.
- Study of advanced networks.
- To be able to develop network using networking tools.

Examination Scheme

Unit:1 Ipv6 Networks

Advanced IPv6 features, including transition. Mobile IPv6 operation. Models to support (WLAN) network roaming , IPv6 transition methods ;

6hrs.

Unit 2: Network Security

Advanced IP routing and multihoming, Challenging networking scenarios. Advanced security issues ' Network performance and monitoring. Advanced IP Multicast

7hrs.

Unit 3: Configuring the Network:

Link-local and Administrator-less networking. Topics in Dynamic Host Configuration, Node and Service Discovery, Multi-homing in Enterprise networks. Issues with renumbering live networks

6hrs.

Unit 4: TCP/IP and Wireless communication technologies:

TCP/IP fundamentals, Reviews on wireless communication technologies, WLAN, Bluetooth, TCP/IP over Wireless Networks

7hrs.

Unit 5: P2P and Overlay Network:

Routing, Multicast, Content Distribution Networks, Content addressing, search, and retrieval

6hrs.

Unit 6: Different type of advanced networks

Bluetooth, 802.11. HiperLAN2, GPRS and Edge Services, UMTS, 3G, Beyond 3G: integrated 4G services. Access technologies: last mile, xDSL, Reviews of packet switching, Advanced topics in Computer Networking Multimedia over a Network, Streaming over Internet, Streaming over wired and wireless Network, Wireless Sensor Networks, Wireless Home Networks

M.TECH (Electronics Technology) PROGRAMMES

Semester I

C 14 High Speed Analog Design Lab

Practical : 2 hrs./week

Credit : 1

Students are instructed to frame and perform laboratory assignments, based on each of theory course. The assignment should encompass the hardware techniques and software tools introduced in the concerned subjects and should prove to be useful for the PG programs in the relevant discipline. Assignment should be a full-fledged system design type problem with multi-dimensional solutions suggested. Assignment should be implemented using known hardware techniques/software tools and should be reliably executable.

Student shall submit a laboratory work document based on these assignments performed at the end of semester. The Laboratory instructor shall guide the students in framing the assignments and defining the problem pertaining to the said subjects.

M.TECH (Electronics Technology) PROGRAMMES

Semester I

ELECTIVE-I

E14 (V) Memory Technologies

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course outcomes

- Analyze the different types of RAM, ROM designs.
- Analyze the different RAM and ROM architecture and interconnects.
- Analysis about design and characterization technique.
- To get knowledge of new developments in semiconductor memory design.

Examination Scheme

Unit 1

Static Random Access Memories (SRAMs), SRAM Cell Structures, MOS SRAM Architecture, MOS SRAM Cell and Peripheral Circuit, Bipolar SRAM, SOI, Advanced SRAM Architectures, Application Specific SRAMs;

6hrs.

Unit 2

DRAMs, MOS DRAM Cell, BiCMOS DRAM, Error Failures in DRAM, Advanced DRAM Design and Architecture, Application Specific DRAM,

7hrs.

Unit 3

High Density ROMs, PROMs, Bipolar & CMOS PROM, EEPROMs, Floating Gate EPROM Cell, OTP EPROM, EEPROMs, Nonvolatile SRAM, Flash Memories. RAM Fault Modeling, Electrical Testing, Pseudo Random Testing-Megabit DRAM Testing-Nonvolatile Memory Modeling and Testing-IDDQ Fault Modeling and Testing-Application Specific Memory

6hrs.

Unit 4

Testing.General Reliability Issues, RAM Failure Modes and Mechanism, Nonvolatile Memory, Reliability Modeling and Failure Rate Prediction, Reliability Screening and Qualification. Radiation Effects, SEP,Radiation Hardening Techniques.

7hrs.

Unit 5

Process and Design Issues, Radiation Hardened Memory Characteristics, Radiation Hardness Assurance and Testing, Ferroelectric Random Access Memories (FRAMs), Gallium Arsenide (GaAs) FRAMs, Analog Memories, Magneto Resistive Random Access Memories (MRAMs), Experimental Memory Devices.

6hrs.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Unit 6

7hrs.

Memory Hybrids (2D & 3D), Memory Stacks, Memory Testing and Reliability Issues, Memory Cards, High Density Memory Packaging, Future Directions, Introduction to digital tablet PC, LCD, DVD player etc.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Semester I

E14 (V) CMOS VLSI Design

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes

- Have the ability to synthesize static and dynamic logic cells based on knowledge of MOS device physics, modeling, and circuit topologies.
- Be capable of designing and implementing combinational and sequential CMOS digital circuits and optimize them with respect to different constraints, such as area, delay, power, or reliability.
- Be capable of implementing a complete design verification process using computer-automated tools for layout, extraction, simulation, and timing analysis.
- To know the fabrication process of cmos technology and its layout design rules

Examination Scheme

Unit 1: Basics of CMOS

6hrs

VLSI Design: History, Trends, Principles, Metrics, CMOS transistors (n-channel and p-channel), The CMOS Switch model, CMOS Inverter mode, Logic devices and interconnect, CMOS circuit analysis: transistors, inverters, interconnect modeling, parasitics, CMOS Process and Layout, CMOS Devices: SPICE and deep sub-micron issues

Unit 2: CMOS: Design Issues

7hrs

CMOS Inverter: speed, power and scaling, Static CMOS Gates, Dynamic CMOS Gates, Power Estimation and Optimization

Unit 3: Modeling

6hrs

Analytical modeling: Elmore Delay, Transmission models, RC, RLC lumped parameter models, Layout for custom logic: Sea of Gates (SoG) model, Design rules, Circuit fabrication methods for CMOS, Levels of abstraction.

Unit 4: Circuits to Systems

7hrs

VLSI circuits to systems, Circuit modeling and layout (demo using standard tools), CMOS design and layout tools, Nano-electronics circuits versus CMOS microelectronics circuits, Nano-computing techniques and device platforms

Unit 5: Digital IC Design

6hrs

Digital CMOS IC design: Sequential Logic Circuits, Implementation Strategies for Digital ICs, Interconnects, Timing and Clocking, Datapath Design, Memory Design, Capacitive parasitics, Resistive parasitics, Inductive parasitics

Unit 6: Timing issues for Digital CMOS circuits

7hrs

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Timing Issues, Clock skew, clocking styles, Self-timed circuit design, Case study of Kitchen timer chip

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Semester I

E 14 (E) Asynchronous Circuit Design

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcome

- To understand theoretical & practical aspects of circuit design by asynchronous method.
- Learning various asynchronous communication protocols.
- Analyze and synthesize asynchronous circuits.
- Understand the classification of asynchronous circuit.
- Understand the hazards and other challenges in the design of asynchronous circuit.
- Able to design asynchronous circuit using Huffman and Muller techniques.

Examination Scheme

Unit 1.

6hrs.

Introduction to asynchronous circuit design, Communication channels, Modeling asynchronous communication in VHDL, Example: MiniMIPS

Unit 2.

7hrs.

Communication protocols, Handshaking expansion, Data Encoding, Syntax-directed translation, Graphical representations, Asynchronous finite state machines, Petri nets, Timed event/level structures

Unit 3

6hrs.

Huffman circuits, Solving covering problems, State minimization, State assignment, Hazard-free logic synthesis, Extensions for MIC operation

Unit 4.

7hrs.

Muller circuits, Complete state coding Hazard-free logic synthesis, Hazard-free ,decomposition

Unit 5

6hrs.

Timing circuits, Zones, POSET Timing, Verification , Circuit verification , Protocol verification

Unit 6.

7hrs.

Applications , History/RAPPID , Performance analysis/testing , Synchronization problem

Semester I

E 14 (E) Advanced Computer Architecture

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes

- To learn powerful high speed computing architectures.
- Learning basics of instruction level pipelining.
- Understand the advanced concepts of computer architecture.
- Exposing the major differentials of RISC and CISC architectural characteristics.
- Investigating modern design structures of Pipelined and Multiprocessors systems.
- To be acquainted with recent computer architectures and I/O devices.
- Understand the different techniques for reducing latencies in I/O devices.

Examination Scheme

UNIT 1 INSTRUCTION LEVEL PARALLELISM

6hrs.

ILP – Concepts and challenges – Hardware and software approaches – Dynamic scheduling – Speculation - Compiler techniques for exposing ILP – Branch prediction.

UNIT 2 MULTIPLE ISSUE PROCESSORS

7hrs.

VLIW & EPIC – Advanced compiler support – Hardware support for exposing parallelism – Hardware versus software speculation mechanisms – IA 64 and Itanium processors – Limits on ILP.

UNIT 3 MULTIPROCESSORS AND THREAD LEVEL PARALLELISM

6hrs.

Symmetric and distributed shared memory architectures – Performance issues – Synchronization – Models of memory consistency – Introduction to Multithreading.

UNIT 4 MEMORY AND I/O

7hrs.

Cache performance – Reducing cache miss penalty and miss rate – Reducing hit time – Main memory and performance – Memory technology. Types of storage devices – Buses – RAID – Reliability, availability and dependability – I/O performance measures – Designing an I/O system.

UNIT 5 MULTI-CORE ARCHITECTURES

6hrs.

Software and hardware multithreading – SMT and CMP architectures – Design issues –

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

UNIT 6 Case studies – Intel Multi-core architecture – SUN CMP architecture - heterogenous multi-core processors – case study: IBM Cell Processor. **7hrs.**

Semester I

Elective –II

E 15 (V) Digital Systems and Testing

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course outcomes

- To learn various combinational and sequential circuits.
- To learn the various faults associated with combinational and sequential circuits.
- To develop logic for removing various faults the digital systems
- To learn various BIST architectures for development of fault free systems.

Examination Scheme

Unit 1: Testing

Testing Defined: definitions and areas within testing. Logic and Fault Modeling.
Mechanics

Definitions: Abstractions level, Faults and errors, Modeling, Test Evaluation, Test Generation, Diagnostics.

6hrs.

Unit 2: System life, Sources of defects?

Representation and models of digital systems across abstraction levels.

Fault Models: logical versus physical; SSL model, opens and shorts, bridging faults;
Basic assumptions.

Review of minimization tools and asynchronous machines, Test Pattern Generation basics.
(activate and drive.), Algebraic approaches, Fault Equivalence and Dominance.

7hrs.

Unit 3: Test Generation

Algebraic Approaches and Structural Approaches, Logic Simulation.

Algebraic Approaches: Boolean difference, Literal position, Effect of fanout on circuits,
Checkpoint faults.

Structural Approaches to test generation. Path sensitization methods. Test Coverage

6hrs.

Unit 4: Logic simulations

Simulation engines: compiler, event driven. Representation of value, circuit, etc.

Logic and Fault Simulation: Delay models for circuit simulation, Fault Simulation Purpose

7hrs.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

of Serial and Parallel Fault Simulation, Deductive fault simulation. Concurrent Fault

Simulation, Critical Path tracing, Statistical Fault Analysis

Unit 5: More Test Generation and D-algorithm

7hrs

D-algorithm. representation, cube algebra, generalized algorithm, Extensions to D-algorithm PODEM, FAN, etc. Random test generation, Complexity issues Functional Test Generation Methods, Heuristic Methods, Exhaustive and Pseudo Exhaustive techniques, RAM and PLA testing, Microprocessor testing, Memory Testing: Memory test complexity, Memory fault models.

Unit 6: Design for Testability

7hrs

Controllability and Observability measures. STEFAN, Ad Hoc techniques, More Design for Testability, Scan Design. Scan Designs: IEEE Standards, Board-Level Testing: Boundary Scan, Data Compression and BIST, LFSR polynomial generation Data compression techniques Aliasing Probability, BIST, Self Checking and PLD Testing

Semester I

E 15 (V) Mixed Signal ASIC Design

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course outcomes:

- Analysis the different types of ASICs design.
- Analysis the different Logic cell architecture and interconnects.
- Analysis about different programmable ASIC design software.
- Identification of new developments in SOC and low power design.

Examination Scheme

Unit 1: Technology and modeling aspects of an advanced BiCMOS ASIC process

6hrs.

LSI Logic analogue BiMOS technology, Background, Process technology, Well formation, Island definition and field region implants, Field oxidation - Island formation, High performance operational amplifiers and comparators

High performance amplifiers, The load compensated OTA (LC-OTA), The Miller compensated OTA (M-OTA), The core-amplifier (C-OTA), High performance comparators, The OTA as comparator, Latched comparators, A high speed accurate comparator.

Unit 2: Switched current techniques for analogue sampled data signal processing

7hrs.

Introduction, First generation memory cells, Second generation memory cells, Limitations of the basic SI memory cell, Channel length modulation, Charge injection, Junction leakage
Applications: Integrator based biquad, FIR filters, Sigma-Delta modulators

Unit 3: Data converters

6hrs.

Parameters for data converter characterisation, Data converters: Basic design considerations, High speed data conversion techniques, Current switched D/A converters, Flash and two-step flash converters, Limits to speed and resolution in data converters Oversampling converters, Intuitive Introduction to Oversampling Data Converters, Noise shaping converters, First order sigma delta modulators Second order sigma delta modulator, Multistage sigma-delta modulator, Non ideal effects in sigma delta modulators, Sampling jitter

7hrs.

Unit 4: Self-calibrating and algorithmic converters

Self-calibrated analogue-digital converters, Architecture with segmented binary-weighted capacitor Array, Self-calibration technique and circuits, Principle of calibration, Calibrating capacitors, Calibrating registers

Unit 5: A high flexibility BiCMOS standard cell library for mixed analogue-digital ASICs

6hrs.

A BiCMOS process dedicated to mixed A/D applications, Cell libraries, Analogue libraries, The digital

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

cell library, CAD tools, The CAD capability, Telescopic Cells, Parametrizable cells, Adjustable cells, Automatic cell biasing and power down, ADS (Analog Design System) An environment for Mixed

signal design, Analogue/digital multi-level mixed mode simulations,

Case Studies:

Example 1: Infra red receiver with decoder and actuator Example 2: Remote control

Unit6: Advanced topics

7hrs

Element matching, Local process variations, Global process variations, Process gradients, Boundary effects, Noise coupling, Substrate noise coupling, Signal noise coupling, Examples of optimized structures, Few applications of mixed signal ASICs:

Applications areas: A heart rate meter, Hearing aid ASIC, Sound and rhythm generator, TV picture in picture processor, A multi-standard modem, A speech scrambler de-scrambler.

Credit: 3

Course outcomes:

- Familiarity with Embedded Systems Design
- Learning architectures of PIC & ARM.

Examination Scheme

Unit- 1 PIC: Modern Architectures

6hrs

Introduction: PIC microcontroller features, MPLAB IDE, PICmicro Architecture, Program memory, Instruction set, Instruction Format, Byte-Oriented Instructions, Bit- Oriented Instructions, Literal Instructions, Control Instructions (CALL and GOTO), Destination Designator (d), Addressing Modes

Unit- 2

7hrs

- PIC micro Hardware: reset, clock, control registers, register banks, program memory paging, Ports, interrupts, Timer and Counter, watchdog timer, power up timer, sleep mode, state machine programming,
- MPLAB overview: Using MPLAB, Toolbars, Select Development Mode And Device Type, Project, Text Editor, Assembler, MPLAB Operations.

ARM :

Unit –3

6hrs

Introduction to Embedded System Design, Embedded System Architecture, Embedded System model, an overview of Programming Languages and examples of their standards, Embedded Processor: ISA Architecture Models, CISC & RISC model, Instruction – Level Parallelism ISA model, Von Neumann & Harvard Architectures.

Unit – 4

7hrs

ARM Embedded System, ARM Processor Fundamentals: Registers, Pipeline, Exceptions, Interrupts and vector tables, ARM Processor family, ARM Instruction Set, Thumb Instruction Set. Overview of C compiler and Optimization: Register allocation, Functions Calls, Pointer aliasing, Structure arrangement, Portability issues, writing and optimizing ARM assembly code

Unit –5

6hrs

Interrupts and interrupt handling Scheme, firmware and Boot loader, Real-Time operating Systems: Context Switching, task tables and kernels, Time Slice, Scheduler algorithms: RMS, Deadline monotonic Scheduling; Priority Inversion, Tasks, Threads and process, Exceptions, Exception handling

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Unit –6

7hrs

Introduction to DSP on ARM –FIR Filter – IIR Filter – Discrete fourier transform –
Exception Handling – Interrupts – Interrupt handling schemes- Firmware and bootloader

Semester I

E15 (E)AUTOMOTIVE EMBEDDED SYSTEMS

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- To make the students completely aware of the different components of the automotive.
- The student completing the course shall be very highly competent in the automotive domain trained for the latest technologies.
- This course addresses modeling and implementation of advanced technology automotive engines for improved fuel economy and emissions, and improvements in systems engineering processes for the design of automotive embedded systems.

Examination Scheme

Unit 1

Current trends in Automobiles, open loop and closed loop systems - components for electronic engine management system. Electro magnetic interference suppression. Electromagnetic compatibility, Electronic dashboard instruments, onboard diagnostic system ,

6hrs.

Unit 2

security and warmingsystem. Electronic management of chassis systems.Vehicle motion control.Sensors and actuators,and their interfacing. Basic sensor arrangement, types of sensors such as- oxygen sensors, crankangle position sensors- Fuel metering/ vehicle speed sensors and destination sensors, Attitude sensor,Flow sensor, exhaust temperature, air mass flow sensors. Throttle position sensor

7hrs.

Unit 3

solenoids, stepper motors, relays. Electronic ignition systems.Types of solid state ignition systems and their principle of operation.

6hrs.

Unit 4

Digital engine control system. Open loop and closed loop control system, Engine cranking and warm up control. Acceleration enrichment. Deceleration learning and ideal speed control, Distributor less ignition – Integrated engine control system, Exhaust emission control engineering.

7hrs.

Unit 5

Automotive Embedded systems.

PIC, Freescale microcontroller based system. Recent advances like GLS, GPSS, GMS. Multiprocessor communication using CAN bus.

6hrs.

Unit 6

Case study- cruise control of car. Artificial Intelligence and engine management

7hrs.

Semester II

C 21 DSP Processors

Teaching Scheme

Lectures: 4 Hrs./Week

Credit: 4

Practical:2Hrs/week

Credit: 1

Course Outcomes:

- To learn TMS320C6xxx, DSP processor architectures.
- To learn how to implement various signal processing applications using TMS320C6xxx.
- To learn code optimization, memory optimization

Examination Scheme

Unit 1:Architecture and instruction set of DSP processor

6hrs.

Introduction to TMS320C6x processor, architecture, pipelining, linear and circular addressing modes, TMS320C6x instruction set, assembler directives, timers, interrupts, serial I/O, DMA, fixed and floating point data format,

Unit 2:

7hrs.

Digital signal processing and DSP systems: Advantages of DSP, characteristics of DSP systems, DSP applications. DSP processors, architecture and instruction set.

Unit 3:

6hrs.

Numeric representations and arithmetic: floating point numbers, IEEE 754 standard for floating point numbers,

Unit 4:

7hrs.

Memory Architectures: memory structures, wait states, extended memory interfaces, addressing mechanisms.

Unit 5:

6hrs

Execution control: Hardware looping, interrupts, stack, relative branch support
Pipelining: pipelining and performance, pipelining depth, interlocking, branching effects, interrupt effects,

Unit 6:

6hrs.

Peripherals: serial / parallel ports, timers, communication ports, on-chip A/D and D/A converters,-external interrupts, on-chip debugging facilities, power consumption, clocking.

Books:

1. DSP Processor Fundamentals: architectures and Features, by Phil Lapsley, Wiley 2. DSP Applications using C and the TMS320C6x DSP

Semester II

C22 REAL TIME OPERATING SYSTEMS

Teaching Scheme

Lectures: 4 Hrs./Week

Credit: 4

Practical: 2Hrs/week

Credit: 1

Course Outcomes:

- Learning Real Time Systems.
- Learning concepts of RTOS
- Gaining familiarity with applications of RTOS in different domains.

Examination Scheme

Unit 1:

Software Architectures, Software Developments Tools, Programming Concepts, Embedded Programming in C and C++

6hrs.

Unit 2:

Queues, Stacks, Optimization of Memory needs, Program Modeling Concepts, Software Development Process Life Cycle and its Model, Software Analysis, Design and Maintenance, Operating System Concepts

7hrs.

Unit 3:

Processes, Deadlocks, Memory Management, Input /Output, Files, Security, the Shell, Recycling of Concepts. Operating system structure Monolithic Systems: Layered Systems, Virtual Machines, Exo-kernels, Client-Server Model

6hrs.

Unit 4:

Real Time Operating Systems (μ C/OS): Real-Time Software Concepts, Kernel Structure, Management, Time Management, Inter task Communication & Synchronization, Memory Management, and Porting μ Cos-II. REAL TIME KERNEL Principles – Design issues – Polled Loop System RTOS Porting to a Target – Comparison and study of various RTOS like QNX – VX works – PSOS – C Executive – Case studies.

7hrs.

Unit 5:

Linux/RT Linux: Features of Linux, Linux commands, File Manipulations, Directory, Pipes and Filters, File Protections, Shell Programming, System Programming, RT Linux Modules, POSIX Threads, Mutex Management, Semaphore Management.

6hrs.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Unit 6:

7hrs.

RTOS APPLICATION DOMAINS viz RTOS for Image Processing – Embedded RTOS for voice

over IP – RTOS for fault Tolerant Applications – RTOS for Control Systems.

Semester II

C 23 High Speed Digital Design

Teaching Scheme

Lectures: 4 Hrs. /Week

Credit: 4

Practical: 2Hrs./Week

Credit: 1

Examination Scheme

Course Outcomes:

- Students shall become familiar with and application of many high speed signal processing building blocks such as amplifiers, ADCs, DACs, etc.
- System applications are of broad general interest or emerging market trends.
- The proper application of high speed devices also requires a thorough knowledge of good hardware design techniques, such as simulation, prototyping, layout, decoupling, and grounding. In the last section students become familiar with these issues as well as EMI and RFI design considerations.

Unit 1: High Speed ADCs

Fundamental of high speed sampling, Base band antialiasing filters, Study of Harmonic sampling and band pass sampling, Direct IF to digital conversion, Distortion and noise in an ideal N bit ADC, AD9220 12 bit ADC, Spurious free Dynamic Range, Measurement of Noise Power Ratio, Flash converters, Case study of AD9066, Study of latency of ADCs,

6hrs.

Unit 2: High Speed ADC Applications

Driving ADC inputs for low distortion and wide dynamic range, Applications of high speed ADC in CCD imaging, High speed ADC applications in Digital transceivers

7hrs.

Unit 3: High Speed DACs and DDS Systems

Introduction to DDS, Aliasing in DDS Systems, 125 MSPS DDS System case study AD9850, systems as ADC Clock Drivers.

6hrs.

Unit 4:

Amplitude modulation in a DDS System, The AD9831 Complete DDS System, High Speed low distortion DAC architecture, High Speed interpolating DACs, QPSK signal generation using DDS

7hrs.

Unit 5: Design issues of high speed Electronics

Simulation tools, Prototyping Circuits, Grounding in high speed systems.

6hrs.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Unit 6:

7hrs.

Power supply noise reduction and filtering, Power supply conditioning, EMI/RFI considerations, Shielding concepts

Reference Books:

M.TECH (Electronics Technology) PROGRAMMES

Semester II

C 24 DSP Processor Lab

Practical : 2 hrs./week

Credit : 1

Students are instructed to frame and perform laboratory assignments, based on each of theory course. The assignment should encompass the hardware techniques and software tools introduced in the concerned subjects and should prove to be useful for the PG programs in the relevant discipline. Assignment should be a full-fledged system design type problem with multi-dimensional solutions suggested. Assignment should be implemented using known hardware techniques/software tools and should be reliably executable.

Student shall submit a laboratory work document based on these assignments performed at the end of semester. The Laboratory instructor shall guide the students in framing the assignments and defining the problem pertaining to the said subjects.

Semester II

Elective-I

E 24 (V) Systems on Chip

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- To learn CMOS IC technology
- Familiarity with MOSFET, gate delay and other system level components.
- To learn I/O architectural details.

Examination Scheme

Unit 1:

IC Technology, Economics, CMOS Technology overview, Power consumption, Hierarchical design, Design Abstraction, EDA tools. **6hrs.**

Unit 2:

MOSFET model, parasitics, latch up, advanced transistor structures; Wire parasitics; Design rules, Scalable design rules, process parameters; stick diagrams, Layout design tools; Layout synthesis, layout analysis. **7hrs.**

Unit 3:

CMOS gate delays, transmission time, speed power product, low power gates; Delay by RC trees, cross talk, RLC delay, cell based layout, Logic & interconnect design, delay modeling, wire sizing; Power optimization, Switch logic networks. **6hrs.**

Unit 4:

Pipelining, Data paths, Adders, ALUs, Multipliers, High density memories; Metastability, Multiphase clocking; Power optimization, Design validation, Sequential testing; Architecture for low power. **7hrs.**

Unit 5:

Floor planning methods, global routing, switch box routing, clock distribution; off chip connections, packages, I/O architectures, pad design. **6hrs.**

Unit 6:

Complete chip design including architecture, logic and layout for Kitchen timer chip OR Microwave oven chip. **7hrs.**

Semester II

E 24 (V) Wavelet Transform and its applications

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes :

- Familiarity with wavelet transform
- Studing applications of wavelet transforms.

Examination Scheme

Unit 1. Continuous wavelet Transform

6hrs.

Introduction, Continuous-Time Wavelets, Definition of the CWT, The CWT as a Correlation. Constant Q -Factor Filtering Interpretation and Time-Frequency resolution, The CWT as an Operator, Inverse CWT.

Unit 2. Introduction to the Discrete Wavelet Transform and Orthogonal-Wavelet Decomposition

7hrs.

Introduction, Approximation of Vectors in Nested Linear Vector Subspaces,
(i) Example of Approximating Vectors in Nested Subspaces of a Finite-Dimensional Linear Vectors Space,
(ii) Example of Approximating Vectors in Nested Subspaces of an infinite- Dimensional Linear Vectors space, Example of an MRA, (i) Bases for the Approximation subspaces and Haar Scaling function,
(ii) Bases for the Detail Subspaces and Haar Wavelet,
(iii) Digital Filter Implementation of the Haar Wavelet Decomposition.

Unit3. MRA, Orthonormal -Wavelets, and their Relationship to Filter Banks

6hrs.

Introduction, Formal Definition of an MRA, Construction of a General Orthonormal MRA,

(i) Scaling Function and Subspaces,
(ii) Implication of the Dilation Equation and Orthonormality,

A wavelet Basis for the MRA

(i) Two scale Relation for (t),
(ii) Basis for the detail subspaces
(iii) Direct sum decomposition,

Digital Filtering interpretation.

(i) Decomposition Filters,
(ii) Reconstructing the Signal.

Examples of Orthogonal Basis-Generating Wavelets,

(i) Daubechies D4 Scaling Function and Wavelet,
(ii) Band limited Wavelets, Interpreting Orthonormal MRAs for 40 Discrete-Time Signals,
(i) Continuous-Time MRA interpretation for DTWT,
(ii) Discrete-Time MRA,

(iii) Basis Functions for the DTWT, Miscellaneous issues related to PRQMF Filter Banks, Generating Scaling Functions and Wavelets from Filter Coefficients

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Unit4. Alternative Wavelet Representations

7hrs.

Introduction, Biorthogonal Wavelet Bases, Filtering Relationship for Biorthogonal Filters, Examples of Biorthogonal Scaling Functions and Wavelets, Two-Dimensional Wavelets, Nonseparable Multidimensional Wavelets, Wavelet packets.

Unit5. Wavelet Transform and Data Compression

6hrs.

Introduction, Transform coding, DTWT for Image Compression,

(i) Image Compression using DTWT and Run-Length Encoding,

(ii) Embedded Tree Image Coding,

(iii) Comparison with JPEG, Audio Compression.

(I) Audio Masking,

(ii) Standards Specifying Subband Implementation: ISO/MPEG Coding for Audio,

(iii) Wavelet-Based Audio Coding, Video Coding Using Multiresolution Techniques:

A Brief Introduction.

7hrs.

Unit6. Other Applications of Wavelet Transforms

Introduction, Wavelet Denoising, Speckle Removal, Edge Detection and Object Isolation, Image Fusion, Object Detection by Wavelet Transforms of Projections, Communication Applications,

(i) Scaling Functions as Signaling Pulses,

(ii) Discrete Wavelet Multitone Modulation

Text Book:

1. Wavelet Transforms - Introduction to Theory & Applications, Raghuveer M. Rao & Ajit S. Bopadi Addison Wesley-1998

DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Semester II

E 24 (E) Microelectromechanical Systems

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- To learn basics of MEMS technology.
- To get knowledge processes involved in MEMS.

Examination Scheme

Unit 1: **6hrs.**
History of MicroElectroMechanical Systems (MEMS), market for MEMS, basics of microtechnology lithography and etching techniques,

Unit 2: **7hrs.**
principles of bulk and surface micromachining: subtractive processes, additive processes (evaporation sputtering, epitaxial growth). Fundamental devices and processes, Multi User MEMS Process (MUMPs) SUMMiT: design rules; applications; micro hinges and deployment actuators,

Unit 3: **6hrs.**
CMOS MEMS, cleanroom lab techniques, MicroOptoElectroMechanical Systems (MOEMS), bioMEMS and biomaterials, piezoresistivity; scanning probe microscopy, scaling laws, applications.

Unit4: **7hrs.**
Lumped element modeling and design, Electrostatic Actuators , Electromagnetic Actuators, Linear and nonlinear system dynamics, resonant systems, Elasticity (stress, strain, material properties) Mechanical structure basics (bending of bes, torsion,natural frequency), Optical system design basics (Gaussian beam optics, matrix optics, resolution)

Unit 5: **6hrs.**
Application case studies: MEMS Scanners and Retinal Scanning Displays (RSD), Grating Light Valve (GLV), Digital Micromirror Devices (DMD),

Unit 6: **7hrs.**
Optical switching, Capacitive Micromachined Ultrasonic Transducers (CMUT)

Reference Books:

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Semester II

E 24 (E) Robotics and Machine Vision

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- Learning fundamental practical aspects of robotics.
- Understanding image processing techniques.
- Using image processing techniques for machine vision applications.

Examination Scheme

UNIT1

Robotics – Introduction–Basic Structure– Classification of robot and Robotic systems –laws of robotics – robot motions – work space, precision of movement.

Drives and control systems: Hydraulic systems, power supply – servo valve – sump – hydraulic motor – DC servo motors – stepper motors – operation.

Mechanical Components of Robots: Power transmission systems: Gear transmission. Belt drives, cables Roller Chains, Link – Road Systems, Rotary to linear motion conversion, Ract and pinion drives, ball bearing screws, speed reducers, Harmonic drives.

6hrs.

7hrs.

UNIT 2

Kinematics of Robot: Introduction, Matrix Representation, Homogeneous transformation, forward and inverse Kinematics, Inverse Kinematics Programming, Degeneracy, dexterity, velocity and static forces, velocity transformation force control systems, Basics of Trajectory planning.

UNIT 3

Robot End Effectors: Types of end effectors – Mechanical grippers – Types of Gripper mechanisms – Grippers force analysis – Other types of Grippers – Vacuum cups – Magnetic Grippers – Adhesive Grippers – Robot end effector interface.

Sensors: Position sensors – Potentiometers, encoders – LVDT, Velocity sensors, Acceleration Sensors, Force, Pressure and Torque sensors, Touch and Tactile sensors, Proximity, Range and sniff sensors, RCC VOICE recognition and synthesizers.

6hrs.

UNIT 4

Machine Vision: Introduction – Image processing Vs image analysis, image Acquisition, digital Images – Sampling and Quantization – Image definition, levels of Computation.

7hrs.

UNIT5 Image processing Techniques: Data reduction – Windowing, digital conversion. Segmentation – Thresholding, Connectivity, Noise Reduction, Edge detection, Segmentation, Region growing and Regio

6hrs.

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Splitting, Binary Morphology and grey morphology operations.

UNIT 6

6hrs

Feature Extraction: Geometry of curves – Curve approximation, Texture and texture analysis, Image resolution – Depth and volume, Color processing, Object recognition by features, Depth measurement, specialized lighting techniques. Segmentation using motion – Tracking. Image Data Compression, Real time Image processing, Application of Vision systems.

Semester II

Elective –II

E25(V) RF Integrated Circuit Design

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- Learning basics of MOSFET.
- Learning RF Integrated Circuits fundamentals.
- Familiarity with EMI, EMC.

Examination Scheme

Unit 1:

Introduction to MOSFET Devices, MOSFET modeling, Spice model, Device parasitics, RF modeling, Parasitics sensitive to RF.

6hrs.

Unit 2:

Issue in RF IC a brief review, Impedance matching, use and design of passive circuits, LNA Design.

7hrs.

Unit 3:

Matching Techniques using algebra techniques, Basic Bond circuits, UHF Mixer design.

6hrs.

Unit 4:

Cross talk, Cross connect architecture, Cross Connect characteristics, classification, Cross connect mechanism, Cross connect mitigation, Cross connect reduction, multiple Cross connect sources.

7hrs.

Unit 5:

EMI, EMC, Importance in ASIC Design, Introduction, EDA Tool in ASIC Design,

6hrs.

Unit 6:

Design Flow, testing, Environment, sources of EMI/RFI, Solutions.

7hrs.

Semester II

E 25 (V) VLSI in Signal Processing

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- Learning various DSP algorithms.
- Filter implementation
- Study of FPGA architecture.

Examination Scheme

Unit 1:

Typical DSP algorithms and representation : DCT, DWT and filter banks, Vector Quantization, Block diagram, signal flow graph, data flow graph and dependence graph.

6hrs.

Unit 2:

DSP application demands and CMOS technologies, Loop bound and iteration bound and the computation, Pipelining and Parallel Processing: Pipelining of FIR Digital filters, parallel FIR digital filters, combined pipelining and parallel processing.

7hrs.

Unit 3:

Retiming, Properties of retiming, Retiming techniques for clock minimization and register minimization. Unfolding, properties and applications of unfolding.

6hrs.

Unit 4:

Folding, 2D Systolic arrays and matrix multiplication, Bit level arithmetic architectures: Parallel multipliers, Baugh Wooley carry save multiplier, Booth Wallace Tree multipliers, Bit serial multipliers, Bit serial FIR filter. Carry free radix-2 addition and subtraction,

7hrs.

Unit 5:

Floating point arithmetic, Clocking for synchronous pipelining and wave pipelining systems, Clock distribution, Floor planning.

6hrs.

Unit 6:

FPGA architectures: block memories, CLBs, IOBs, Routing resources, specific resources like MAC, DLL, clock managers etc.

7hrs.

Semester II

E 25 (E)High Performance Networks

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- Gaining familiarity with network design issues.
- Introduction to spread spectrum and CDMA.
- Familiarity with internet security algorithms.

Examination Scheme

Unit 1:

Types of Networks, Network design issues, Data in support of network design. Network design tools, protocols and architecture.

6hrs.

Unit 2:

VoIP system architecture, protocol hierarchy, Structure of a voice endpoint, Protocols for the transport of voice media over IP networks. Providing IP quality of service for voice, signaling protocols for VoIP, PSTN gateways, VoIP applications.

7hrs.

Unit 3:

Introduction, challenges, SCSI protocols and architecture: RAID, Backup and mirroring, Fiber channel attached storage. Network attached storage including NFS, CIFS and DAFS, Management of network storage architectures. New storage protocols, architectures and enabling technologies.

6hrs.

Unit 4:

Introduction to CDMA and spread spectrum system, CDMA standards, system architectures wireless communication systems, physical, network and data link layer of CDMA, wireless LAN standards: IEEE 802.11b, ARPA.

7hrs.

Unit 5:

Overview of Information Theory. Lossless Compression: Run-Length Encoding, Facsimile compression, String-matching Algorithms. Lossy Compression: DCT, Wavelet compression.

6hrs.

Unit 6:

A model for internet security, security attacks, services, internet standards & RFCs, Cryptography, Conventional encryption, principles and algorithms, cipher block, modes of operation, location of encryption devices, key distribution, Public key cryptography principles and algorithms, RSA algorithm.

7hrs.

M.TECH (Electronics Technology) PROGRAMMES

Semester II

E 25 (E) Mobile Computing

Teaching Scheme

Lectures: 3 Hrs./Week

Credit: 3

Course Outcomes:

- Introduction to 1G to 4G architectures.
- Familiarity with GSM, VoIP systems.
- Mobile computing applications.

Examination Scheme

Unit 1:

1G to 4G mobile telephone technologies.

6hrs.

Unit 2:

Reference architectures for wireless LAN, WLAN, GPRS.

7hrs.

Unit 3:

GSM and VOIP architecture, 4-G LTE network architecture and protocols

6hrs.

Unit 4:

Transmit diversity and MIMO spatial multiplexing,

7hrs.

Unit 5:

Applications of Mobile computing Business value behind mobile application development
Best practices for the entire project life cycle.

6hrs.

Unit 6:

Casestudies secure mobile application development Fundamentals of wireless
Mark up language WML script applications.

7hrs.

Reference Books:

1. Introduction to Mobile Telephone Systems, 2nd Edition, 1G, 2G, 2.5G, and 3G Technologies and Services by Lawrence Harte
2. Wireless and Mobile Data Networks by Aftab Ahmad
3. Wireless and Mobile Network Architectures by Yi-Bing Lin and Imrich Chlamtac
4. Mobile Applications: Architecture, Design, and Development by Valentino Lee, Heather Schneider, and Robbie Schell
5. Mobile IP Technology and Applications by Stefan Raab and Madhavi W. Chandra
6. Mobile Application Security [Paperback] Himanshu Dwivedi (Author), Chris

Semester I & II
S 16 & S 26 Seminars

Teaching Scheme

Contact hrs : 2 Hrs./Week/student

Credit: 2

Examination Scheme

Students shall deliver Seminar on the State-of-the-Art topic in front of Examiners and Student-colleagues. Prior to presentation, he/she shall carry out the detailed literature survey from Standard References such as International Journals and Periodicals, recently published reference Books etc. and submit a report on the same along with computer based presentation copy to the concerned examiner/guide at the end of the seminar. The assessment shall be based on selection of topic, its relevance to the present context, report documentation and presentation skills.

Guide should spare(Guide) for 2hrs /week/student for seminar

M.TECH (Electronics Technology) PROGRAMMES

Semester-III

T 31 Industrial Training:

Teaching Scheme

Contact hrs : 2 Hrs./Week/student

Credit: 4

8 Weeks at the end of First Year and as a part of evaluation at the end of third semester student should submit the report for the 8 week industrial training and give presentation to the concern guide, concern guide should spare 2hrs/week/student

Examination Scheme

SHIVAJI UNIVERSITY
DEPARTMENT OF TECHNOLOGY
M.TECH (Electronics Technology) PROGRAMMES

Semester-III & IV

S 32 and D 42 Dissertation Project Phase I & II

The student shall be allowed to submit the dissertation phase I report only after the completion of minimum 50% work of the total project with intermediate /partial results of the dissertation project to the concern guide and the dissertation phase II report only after the full-fledge demonstration of his /her work to the concerned guide. Assessment of the dissertation shall be based on design & implementation aspects, documentation & presentation skills, utility of the dissertation work & publications based on the same.

For the dissertation phase I and phase II concern guide should guide to each student minimum for **2 hrs** per week till the final submission of the dissertation of the concern student.

Equivalence of M. Tech (Electronics Technology) Semester I and II

Semester I

| Course Code | M. Tech (Electronics Technology) Semester I Pre-revised syllabus | Course Code | M. Tech (Electronics Technology) Semester I & II Revised syllabus |
|--------------------|---|--------------------|--|
| C11 | CMOS VLSI Design | C11 | CMOS VLSI Design |
| C12 | Digital Systems Testing and Simulation with VHDL | E15(V) | Digital System and Testing |
| C13 | High Speed Analog Design Techniques | E25(V) | High Speed Analog Design Techniques |
| E 14 | Elective –I (PIC ARM and AVR) | C13 | RISC Microcontrollers |
| E 15 | Elective –II (Embedded C and RTOs) | C22 | Real Time Operating System |

Semester II

| Course Code | M. Tech (Electronics Technology) Semester II Pre-revised syllabus | Course Code | M. Tech (Electronics Technology) Semester I & II Revised syllabus |
|--------------------|--|--------------------|--|
| C 21 | DSP Processor Fundamentals | C 21 | DSP Processor |
| C 22 | High Speed Digital Design Techniques | E14(V) | High Speed Digital Design Techniques |
| C 23 | Advanced Computer Networks | E15(E) | Communication Networks |
| E 24 | Elective –III (Design using FPGA and VHDL) | C12 | Reconfigurable Platforms & HDL |
| E 25 | Elective –IV(DSP Algorithms and Applications) | C 23 | VLSI in Signal Processing |
